

## Morehead Foundation at UNC Begins Record Setting Year in Granting 107 Awards, Graduating First Law Fellows

The 1969 year has been a record-setting one thus far for the Morehead Foundation, which is headquartered on the University of North Carolina campus at Chapel Hill.

Established in 1945 by the late John Motley Morehead of Rye, N. Y., the Foundation annually awards four-year undergraduate scholarships to the University to deserving high school seniors, and fellowships for study in the graduate, law, medical and business schools. A native of North Carolina and graduate of the University, Mr. Morehead was an industrialist and executive of the Union Carbide and Carbon Co.

Since January, the Foundation has awarded undergraduate scholarships to a record number of 107 boys, has established two fellowships in the Graduate School of Business Administration, has witnessed the graduation of its first three law fellows and has announced plans to expand its under graduate scholars from England.

Mid-West, Middle Atlantic states and Southeast.

The English awards will be valued at \$10,000 each for four years of study at UNC, including tuition and fees. Each English school may nominate two scholars annually in the competition. Four students will be selected from the 20 nominees in personal interviews in London next spring.

While formal selection of the first four English scholars will not begin until next year, the Foundation has already chosen one English scholar to attend the University beginning this fall. He is Anthony Steward of Haileybury, near London. Trustee Chairman Hugh G. Chatham and other Foundation trustees and staff members visited the English schools in April. They met Steward during their visit and decided to invite him to be the first English Morehead Scholar. He is an athlete, editor of the school newspaper and the Second Perfect in the Haileybury School.

**DO YOU WANT to play better golf this summer?** Properly fitted glasses may do the trick, according to the Better Vision Institute. Good glasses are especially helpful in putting, reading the green and judging stroke and distance. Bifocal wearers who find the "reading" portions of their lenses are in their line of sight when addressing the ball may have special "golf bifocals" made. These special lenses have a very small bifocal at the bottom of the lens for checking the score card or reading the grill menu. It is so small and so low in the lens that it does not interfere. The Better Vision Institute warns that a professional eye examination is the only way to find out if you need correcting lenses or other vision help.

## HINTS TO HOMEMAKERS

Any homemaker who has had clothing damaged by mildew will agree that precautions against this household annoyance are well worth taking.

Molds causing mildew have a liking for moisture, darkness, and warmth, point out extension clothing specialists, North Carolina State University. Unfortunately, clothing stored during muggy summer weather can provide the perfect setting for mold growth.

However, the careful homemaker can protect her family's garments against mildew damage.

Cleanliness, good ventilation and dry atmosphere are effective weapons against closet mildew. Soil on clothing can supply nutrients for molds. Always wash or dryclean clothing before you store it.

Hang clothes as loosely as possible, so air can circulate round them. Store shoes, suitcases, and other leather goods on shelves.

Chemicals to dry the air can also help combat mildew. Silica gel, activated alumina and cal-

cium chloride, often sold under trade names, help control mold growth by absorbing moisture from the air. Silica gel and activated alumina are not harmful to fabrics and can be hung in cloth bags in closets; placed in open containers on closet floors or spread in the folds of clothing stored in drawers, boxes or trunks. Calcium chloride can be placed in open containers in closets. However, it should not come into contact with the fabrics since it can make holes in them.

"Paradichlorobenzene, often used for moth control, also controls mildew," the specialists add. But since it damages some plastics, you should remove buttons, ornaments and hangers made of plastic before using the compound, they note.

A few precautions can keep mildew damage from clothing and fabrics not in storage. You should dry soiled clothes, towels and washcloths before putting them in a hamper. Keep wet shower curtains stretched out. They are likely to mildew if left bunched together or stuck to the wall or tub.

If you find you've sprinkled more laundry than you have time to iron in a day, dry and air it. Dampened rolled-up clothes are an open invitation to mildew.

# This is no accident

But you're our witness, anyway—to a pieceful demonstration of how quickly and easily Maverick can be taken apart and put together. We designed Maverick that way for a good reason. When you're paying by the hour for service or repairs, speed is important. And at times like this, nothing can beat a simple machine.

Most new cars are more and more complicated. And more expensive to care for. Maverick's so simple to service, you can do it yourself—if you really mean it about being independent.

You won't feel like an orphan either. Our Owner's Manual shows you how to handle all the routine service. You can tune and time your engine, change plugs and points, adjust the idle, the headlamps, the handbrakes, do nearly 40 different service operations.

And if you crease a fender or crack a grille, you can almost smile. Maverick's front fenders bolt on and grilles are replaceable in minutes. And where time means money, fast means savings.

Stop in once every 36,000 miles for a lube job. Oil changes are 6,000 miles apart. (The leading import suggests oil changes twice as often and lube jobs every 6,000 miles.)

While still being simple, Maverick is big enough to take the whole family—without streaming luggage from the roof. It's small enough to park easily, and go light on gas. A 105-hp Six gives you real passing power. (You get 52 more horsepower than the leading import offers.) And the wider stance gives you a smoother ride, better handling and roadability.

It's no accident that Maverick is the hottest selling new car to come along in five years. We designed it that way. See it at your Ford Dealer's.

Shortly after Foundation officials bade farewell to its latest crop of graduates, Hugh G. Chatham of Elkin, chairman of the Foundation's Board of trustees, announced plans for expanding the undergraduate scholarship program to include students from England.

Ten public schools in England will be included initially in the expansion and four English Morehead Scholars a year will be selected in London. The screening will be carried out in a manner similar to that now employed in competition between students from North Carolina high schools and 26 preparatory schools in New England, the

Early in the spring, the Foundation announced plans to extend its graduate fellowship program to include the graduate School of Business Administration. Starting this fall, two, two-year fellowships valued at \$5,000 each will be offered in the Masters in Business Administration Program.

These business fellowships join nine Morehead Fellowships which have been awarded annually since 1965 to students enrolling in the graduate, law and medical schools. Three fellowships are awarded in each of these three fields each year.

The graduate fellowships are worth \$16,000 each for four years of study leading to the Ph. D. degree at UNC. Law fellows receive awards valued at \$7,500 each for three years of study. The medical Fellowships are valued at \$10,000 each for four years of study. Tuition and fees are granted in addition to the money.

The first three law fellows, as well as 47 undergraduate scholars, received degrees from UNC at the 175th Commencement exercises June 2 in Carmichael Auditorium. The first Morehead undergraduate scholars were selected in 1951. Over 800 have attended the University since that time.
