FAMOUS LONDON LANDMARK DESTROYED BY FIRE

At a loss, including valuable contents, of \$10,000,000, the Crystal Palace was totally destroyed by London's greatest fire in a century. Originally built in Hyde Park as part of the Exposition of 1851 at a cost of \$6,750,000, it was later removed piecemeal to its last location in South eastern London.

GOOD EGGS PRODUCE GOOD CHICKENS

Some poultrymen are more optimistic than businesslike in their methods.

This is especially true of those who assemble all kinds of eggs, good or bad, for hatching purposes, said Roy S. Dearstyne, head of the State College poultry department. "You can't get more out of your incubator than you put into it," he declared in urging poultrymen to

Bernice Sanford.

be more careful in selecting eggs for hatching.

Hatching eggs should come only from high quality, healthy, vigorous birds. They should be normal in shape, have well calcified shells, and weigh more than 23 ounces to the dozen.

They should be gathered several times a day and stored in a warm place to avoid chilling, he said, as eggs that have chilled too much will not produce chicks. A temperature of 40 to 60 degrees is best.

Hatching eggs should not be kept in storage for more than seven to ten days, he added.

The incubator should be carefully cleaned, disinfected, and tested before the eggs are placed inside. Likewise, the brooder and brooder house should be cleaned and tested before any chicks are put in to grow.

Dearstyne advised that the brooder should be started in operation at least 24 hours before the arrival of the chicks, so as to give it time to become evenly warmed throughout.

Destroy subnormal or cull chicks. Do not brood more than 300 chicks in one unit, and allow a square foot of floor space for every two chicks. Watch the temperature closely; overheating is worse than a slight chilling, he warned.

SOIL CONSERVING PAYS DIVIDENDS

That a complete soil conservation program is practicable and will pay dividends has been proven on the farm of E. W. Wagner of the Groometown section of Guilford County.

Prior to January, 1935, Wagner's farm was being worked in truck and row crops very conducive to erosion on his sandy sloping land. An erosion control program adaptable to the farm was worked out, including a crop rotation plan, strip cropping, retirement of steep land to pastures, contour furrowing, terracing, and forest management, all of which Wagner has been adhering to very closely.

An area of two and one-half acres on a 20 percent slope, set aside for permanent hay crops, produced 8 tons of hay this past summer, it was reported by James M. Parks, of the Soil Conservation Service.

Since Wagner has increased his livestock from 2 to 9 head, he is increasing his hay and pasture acreage still more. He also produces pigs for market and cultivates a 5-acre field of tobacco annually.

Most of the crops are to be grown on the bottomlands in a definite 3-year rotation. Corn to be grown on the uplands will be alternated with close-growing crops in strips.

Barley is grown as a substitute for corn and Wagner has 18 acres in lespedeza annually. Wagner also grows Austrian winter peas, vetch, crimson clover, and rye for erosion control and to increase the fertility of his soil.

There is a complete erosion control program on the Wagner farm, said Parks, and it is paying big dividends, with no greater amount of labor made necessary on the part of the landowner.

FORD

advances into 1937 with the **LOWEST PRICE IN YEARS** and new operating economy

THE ADDITION of a new 60-horsepower engine to the Ford line for 1937 brings you a new, low price and gives you a choice of two V-type 8-cylinder engines. 85 horsepower for maximum performance. 60 horsepower for maximum economy.

The 60-horsepower V-8 engine was originally developed for use in England and France, where fuel costs are high. It has been proven there for two years with brilliant success. Now, brought to America, it

creates an entirely new standard of modern motoring economy!

The "60" engine, available in five body types, is built in exactly the same body size and wheelbase — to the same advanced design — with the same comfort and convenience as the "85." And it delivers V-8 smoothness at speeds up to 70 miles an hour.

Two engine sizes—but only one car and one purpose—to give you more miles and more satisfaction for your money in 1937.

FORD FEATURES FOR 1937

APPEARANCE—Distinctive design. Headlamps in fender aprons. Modern lid-type hood. Larger luggage space. New interiors. Slanting V-type windshield.

BRAKES—Easy-Action Safety Brakes with "the safety of steel from pedal to wheel." Cable and conduit control. About one-third less brake pedal pressure required.

BODY—All steel. Top, sides, floor and frame welded into a single steel unit. Safety Glass throughout at no extra charge.

COMFORT AND QUIET—A big, roomy car. Center-Poise comfort increased by smoother spring-action with new pressure lubrication. New methods of mounting body and engine make a quieter car.

A Satisfying Feeling

A bank account at Xmas time provides that certain satisfying feeling that makes you know that Santa will not miss your home this year. It's real insurance for a happy Christmas as far as material things go. Perhaps it would not be a bad idea for you to start an account for your children at this time of the year. Let them keep it and some day they may be proud of the account that Santa started.
