Beetles Found In Tobacco Plant Beds

Multiply Rapidly In Warm Weather And May Become Serious Threat This Year

Flea beetles have been found in tobacco plant beds of practically every tobacco-growing county in eastern North Carolina.

Multiplying rapidly in the unusually warm weather this season, the beetles have become a serious threat to the tobacco crop this year unless they are brought under control.

Dr. Z. P. Metcalf, head of the State College department of zoology and entomology, has offered the following suggestions for controlling this pest:

Dust the plant beds with 1% rotenone dust at the rate of half a pound to each 100 square yds. A dusting machine is necessary to get satisfactory results.

The dust may be blown down through the canvas covers over the plant beds when the cloth is dry.

The dusting should be repeated every three or four days until the beetles have disappeared. If they show up again, the dusting should be resumed.

Blue mold is spreading over the tobacco belt, but on warm, sunny days, growers who lay back the canvas so the sun will shine directly on the plants have found that this helps control the disease.

Sunshine is the enemy of blue

mold fungus, said Dr. Luther Shaw, extension plant pathologist at the college, and so far this season there has been plenty of sunshine.

Spraying with red-copper-oxide-cottonseed-oil spray and applying nitrate of soda lightly to the plant beds are other blue mold control measures favored by growers.

Farmers in the vicinity of Sylva, Jackson County, are using undried bagged limestone at the rate of 1,500 to 2,000 pounds an acre this season, reports Howard Clapp, asst. agent.

CIRCUS READY TO START

Sarasota, Fla. — The big circus is about ready to start its 1938 season, the year's sensation being a 500-pound gorilla which travels in an air-conditioned glass cage designed to maintain the temperature and humidity of an African jungle, as they are, few of the species ever long survive the American climate.

In 1938 more than 500,000,000 money orders were issued.
