

FARM QUESTIONS ANSWERED

Question: What is the best solution to use for the control of stomach worms in sheep?

Answer: The copper sulphate solution is more generally used in North Carolina. Make the solution by dissolving one ounce of copper sulphate (blue stone) in three quarts of water and adding one ounce of Nicotine Sulphate (Black Leaf 40). Yearling and mature sheep should receive from 3 to 4 ounces at each treatment. Lambs from 65 to 85 pounds in weight should receive from two and one-half to three ounces and those from 50 to 60 pounds two courses. Smaller lambs will take from one to one and one-half ounces per treatment.

Question: When should seed Irish potatoes be selected?

Answer: Seed potatoes should be selected at harvest time. Go through the field just before harvesting and dig separately a large

number of hills keeping the potatoes from each hill to themselves. Then select the seed tubers from those hills containing the largest number of uniform potatoes typical of the variety. Be sure that the potatoes selected are free from disease spot and bruises. Extremely large tubers or those that are pointed at the ends should be discarded.

Question: How can I prevent the horns from growing on my young calves?

Answer: The development of the horns can be prevented by applying caustic soda or potash to the horn button when the calf is four to eight days old. Clip the hair from over and around the buttons and wash and thoroughly dry the clipped surface. Wrap one end of the caustic stick to protect the hand, slightly moisten the other end and carefully rub it on the horn button two or three times, making a raw spot about the size of a nickle. Do not rub until the spot bleeds. If there is any chance of rain, the calves should be kept under cover.

Lint Growers Now Side-Dressing Crop Delayed By Cold

Raleigh, June 19—Side-dressing North Carolina's cotton crop, now recovering from the effects of a cold spring, is in full swing, according to Dr. E. R. Collins, fertility agronomist of the N. C. Agricultural Experiment station.

In some cases where growers secured a good stand from the first planting, the agronomist pointed out, the side-dresser has already been applied. However, where the cotton had to be replanted, the job is just now getting underway.

For those who have not yet applied a side-dressing to their crop, Dr. Collins recommended 16 pounds of soluble nitrogen, the equivalent of approximately 100 pounds of nitrate of soda to the acre. This amount is for the lighter, sandier soils, and should be cut down to 10 pounds of soluble nitrogen on the heavier more fertile soils.

The agronomist explained that the side-dressing should be applied within ten days after the cotton plants are chopped.

Where rust has appeared in previous crops, from 75 to 100 pounds of murate of potash also should be applied not later than ten days after chopping.

Dr. Collins explained that side-dressing is more common in the Coastal Plain section of the State where the soils are sandier and lighter.

Also, he pointed out, there is more need of potash in this area, particularly on land growing cotton and peanuts in rotation, the latter crop taking much of the potash from the soil.

As a whole, the agronomist said, the cotton crop in North Carolina is good this year, despite the set-backs it received earlier in the season.

INCREASE

A noticeable increase in the number of home gardens in Sampson county has taken place this year, according to J. P. Stovall, assistant farm agent of the State College Extension service.

UNITED STATES TO PREPARE 36 IDLE SUBS

Washington — Navy officials said recently that most of the 36 idle submarines to be put back into active service probably would be recommissioned at New London.

Pending supplemental defense appropriations provide \$11,715,000 for preparing the craft for sea duty and maintaining them for a year.

Six or eight already are in reserve, ready for operation, at the New London base, and the rest are idle at Philadelphia.

FINGERPRINT ALIENS LANDING IN THIS COUNTRY

New York — The Federal Government has begun to fingerprint the 500,000 alien seamen who entered New York harbor each year. All alien ship's officers on U. S. flag line vessels—are denied shore leave until they have been fingerprinted.

An older youth Service Club for farm boys and girls between the ages of 18 and 25 has been organized in Halifax county, reports Assistant Farm Agent F. W. Reams.

WELCOME TO ROXBORO

"THE COURTEOUS CITY" AND

Oakley's Service Station

DURING "HOSPITALITY WEEK".

We are sure that you will enjoy the big week and we hope you find time to visit our place for SINCLAIR GAS and OIL, also Washing and Polishing, etc.

OAKLEY'S SERVICE STATION

Corner Court and Lamar

DAISY . . .

Pretty Daisy prims and preens
Just radiant with Health!
Each day she eats her fill of greens
Vitamin-rich in food-value wealth.

We feel sure that Hospitality visitors will leave the "Courteous City" feeling much better if they drink Quail Roost Grade A Milk while here.

WE HOPE YOU ALL ENJOY YOUR VISIT.

Roxboro Dairy Products Co.

A. C. Fair, Prop.

Phone 2921

Welcome
HOSPITALITY Week

THE COURTEOUS CITY
AND
THE COURTEOUS COUNTY
EXTEND
A FRIENDLY WELCOME
TO ALL VISITORS.

**Roxboro Building And
Loan Association**

**City Of Roxboro
BUDGET ESTIMATE**

For
Fiscal Year 1940-1941
- Summary -

Appropriations Recommended:

General Government	\$ 8,653.00
Public Works	14,147.00
Public Safety	27,375.00
Debt Service Fund	27,375.00
Water Works Fund	40,200.00
Total	\$100,871.00

I certify that the foregoing is correct, This June 19, 1940.

G. J. CUSHWA, Clerk.

*Early Americans Must Have Started
Hospitality In Roxboro
Because It Has Been Here A Long Time*

And so the spirit of Hospitality comes down through generations and once again the people of this county observe "Hospitality Week", June 23rd. - 29th.

We bid all guests "Welcome" and trust that each and every one will have a nice time in the Courteous City and County.
