

FARM QUESTIONS ANSWERED

Question: How can I get forest tree seedlings from the State Nurseries?

Answer: See your county farm agent and he will give you an application blank and submit your order through R. W. Gracbar, Extension forester of N. C. State College. The county agent also has a schedule of prices for various species, and he will be glad to advise with you as to the correct species for your locality, taking into account soil and climatic conditions. Black walnut seedlings will cost you \$10 per thousand delivered or \$8.50 F. O. B.; white pine transplants are \$4 per thousand delivered and \$3.50 F. O. B.; white pines are \$3 per thousand delivered and \$2.75 F. O. B.; and all other species are \$2 per thousand delivered and \$1.80 F. O. B.

Question: When will the annual fall meeting of the N. C. State Beekeepers' Association be held, and where?

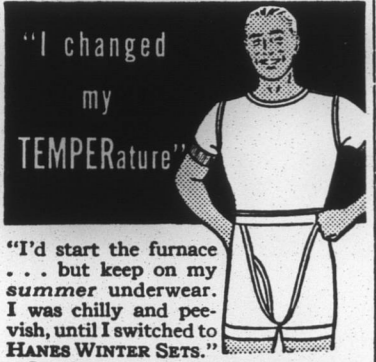

Answer: The State Beekeepers' Association will meet on Thursday, November 14, at Henderson in Vance County. Headquarters will be the office of Farm Agent J. W. Sanders. Prof. F. B. Meacham of State College, secretary of the association, is in charge of arrangements and will gladly furnish further information about the meeting. Several outstanding speakers have been obtained to address the beekeepers.

Question: What is the best tobacco plant bed fertilizer?

Answer: The Agronomy Tobacco Work Conference, composed of agronomists of North Carolina, Virginia, Georgia, Florida and the U. S. Department of Agriculture, recommends a tobacco plant bed fertilizer containing 4 percent nitrogen, 8 percent phosphoric acid, and 3 percent potash. The addition of one percent available magnesia will be beneficial in certain cases and its inclusion is generally recommended. The agronomist strongly urge that a fertilizer practically free of chlorine be bought.

Power Company Promotes Men Within Ranks

Shown above are the principal figures in a number of promotions just announced by President L. V. Sutton of the Carolina Power and Light Company at Raleigh. Left to right, seated, they are: M. T. Dunlap, manager of distribution service department; C. N. Rackliffe and T. F. Drew, assistants to Vice President Vecker; and H. G. Isley, general sales manager. Back row, left to right: J. S. Bourne, assistant manager, distribution service department; W. Paul Lyman, manager of industrial sales; M. H. Hicks, manager of commercial sales; and E. N. Pope, director of sales promotion and advertising.

Stock Should Be Kept Away From Crotalaria Crop

Crotalaria is one of the newer soil building crops in North Carolina. It is a legume especially well adapted to the sandhills sections. But crotalaria is poisonous to cows and other livestock, warns Dr. C. D. Grinnells, veterinarian of N. C. State College. "Crotalaria spectabilis is an excellent legume, but its leaves, stems, and seeds are toxic to all livestock and a small quantity of these can kill an animal," Dr. Grinnells declared. Use this plant for cover or for building the soil, but don't let your stock get to it, he advises.

Crotalaria is not palatable to livestock except when in the blossom stage, and ordinarily is not eaten unless other grazing is scarce, the State College authority continued. It is very much in blossom in several sections of the State at the present time.

"All cases of crotalaria poisoning do not develop in the same length of time," Dr. Grinnells declared. "According to scientists of the Florida Agricultural Experiment Station, where extension work on the poisonous effects of the plant has been done, cases may develop from the second to the sixth month after the animal has eaten the plant."

The veterinarian says that the outstanding symptoms of crotalaria poisoning are: Loss of appetite, weakness and an unsteady gait, a depressed attitude on the part of the animal, diarrhea, and bloody nasal discharge.

"We are not trying to discourage the growing of crotalaria in certain sections of the State, but lespezeza usually makes a much better legume and is perfectly safe as a feed for all types of livestock," the veterinarian concluded.

Exports of nearly all United States farm products, except cotton, were greatly reduced during the first twelve months of the current European war, reports the U. S. Department of Agriculture.

WANT ADS

WANTED — Good milk fed veals paying top prices. We will pay you more.
Pender's Market 9-5-1f

Cotton Mattress Program Still Being Expanded

Miss Ruth Current, State home demonstration agent, announces that the cotton mattress-making program for low income farm families has been continued and expanded by the U. S. Department of Agriculture. Provision has been made so that more than one mattress may be obtained by a family, and the maximum income limits have been raised.

"Under the 1940-41 program," Miss Current said, One mattress can be distributed for every two members of a family, up to three mattresses, except that any mattress previously received shall be deductible.

"The new regulations provide that any family, regardless of its place of residence, is eligible for material provided at least one-half of the total income is derived from agricultural occupations and its total income last year did not exceed \$600 plus \$50 for each member of the family over four persons. Also, any family, regardless of its source of income, is eligible for material provided it lives in the country and its total income did not exceed \$500 plus \$50 for each member of the family over four persons."

Miss Current says that county farm and home agents will continue to take applications for material, which will be supplied as in the past by the Surplus Marketing Administration. The Triple-A committees will certify applications. Miss Current and John W. Goodman, assistant director of the State College Extension Service, are co-directors of the program in North Carolina.

"With these new liberal regulations, we hope to place from 175,000 to 200,000 mattresses with about 100,000 low income families in North Carolina," Miss Current declared.

Hillside Test Shows Value Of Cover Crop

Winter is approaching and that means the loss of soil on farms where the land is not protected with a cover crop. To prove to farmers the value of a winter cover in soil and water conservation, a number of county farm agents of the State College Extension Service are cooperating with other agencies in conducting hillside tests to accurately measure the loss of soil and plant food as a result of erosion.

One such test is being conducted in Franklin County, on the farm of H. F. Fuller of Louisburg, Route 1. A recent Farm Tour, held cooperatively by the Extension Service, Soil Conservation Service, Farm Security Administration and other agencies, showed the following results, according to Farm Agent W. C. Boyce: In two plots where cotton and corn have been grown continu-

ously since 1937, with no winter cover crop, the silt boxes at the bottom of the hill collected 44 tons of soil per acre per year. In another plot, where lespezeza has been grown continuously, no soil was lost during the same period.

In two other plots, where corn and cotton have been grown, and crimson clover used as a winter crop, the annual loss of soil per acre from the 7 percent slope was 38 tons. But where a four-year rotation of cotton, corn and barley was planted, with lespezeza, crimson clover and barley as winter cover crops, the annual loss of soil per acre was only 7 tons.

Boyce also reported that in 1939 the corn yielded 31 bushels per acre on the plot where corn has been grown continuously, 51 bushels per acre where it was

grown in a two-year rotation, and 53 bushels per acre where it was grown in a four-year rotation. In 1940, barley grown in the four-year rotation yielded 55 bushels per acre.

There's Winter Work In Plenty To Be Done

Plan now for your next year's garden, and prepare for planting early vegetable plants in February and March, advises H. R. Niswonger and L. P. Watson, horticulturist of the N. C. State College Extension service.

They point out that November, December and January are not regarded generally as important for garden and orchard work, but there are many necessary things that can be done to best advantage during the winter months. The home garden and orchard do not demand a great amount of time, but they do require systematic planning.

The Extension specialists make the following suggestions: Broadcast manure to be turned under in November or disced in early in the spring. If the garden is on clay soil, break it in November to improve the physical condition. Repair fences or build new ones if the garden is in a new location.

Provide extra space in tobacco plant beds for growing tender vegetable plants. Although a hot bed is not a necessity, it will prove to be a profitable investment for growing early plants to be transplanted later.

Prune and spray all fruit trees and grape vines. Peach trees not treated for borers in October should have the borers removed now by hand. Cut posts and stakes and place conveniently to be used next summer to support running beans, tomatoes, and small

fruits. Write to the Agricultural Editor at N. C. State College, Raleigh for one or more of the following Extension Circulars: No. 122, "The Farm and Home Garden Manual;" No. 185, "Spray Calendar for Peaches;" No. 192, "Apple Spray Calendar;" No. 205, "Pruning the Apple Tree;" No. 210, "Fruits and Nuts for Home Use;" No. 231, "Growing Early Vegetable Plants;" and No. 235, "Facing Farm Facts." They will be sent free.

Soybean production this year is indicated to be 81,500,000 bushels, approximately 6,000,000 bushels below the 1939 production, estimates the U. S. Bureau of Agricultural Economics.

LEGAL NOTICE

ADMINISTRATOR'S NOTICE

Having qualified as Administrator of the estate of Mrs. Anna E. Cole, deceased, late of Person County, North Carolina, this is to notify all persons having claims against the estate of said deceased to exhibit them to the undersigned at Roxboro, N. C., on or before the 19th day of September, 1941, or this notice will be pleaded in bar of their recovery. All persons indebted to said estate will please make immediate payment.
This 19th day of September, 1940.
Wm. D. Merritt, Jr.,
Admr. of Mrs. Anna E. Cole.
10-17-24-31

North Carolina, Person County. In the Superior Court, Before the Clerk. Notice
Geneva Gentry Burton vs. Henry E. Burton, John Gentry, Leslie Gentry and wife, Julia Gentry, Rosa Lee Gentry Jones and husband, Theodore B. Jones, Freddie Gentry Harris and husband, Charles L. Harris and Mable Warren Gentry.
The defendants Henry E. Burton, John Gentry, Leslie Gentry and wife, Julia Gentry, Rosa Lee Gentry Jones and husband, Theodore B. Jones, Freddie Gentry Harris and husband, Charles L. Harris and Mable Warren Gentry, will take notice that an action entitled as above has been commenced in the Superior court of Person county, North Carolina to sell real estate for division in which the defendants have an interest; and the said defendants will further take notice that they are required to appear at the office of the Clerk of Superior court of said county in the Court House in Roxboro, N. C. on or before the 5th day of December, 1940, and answer or demur to the complaint in said action, or the plaintiff will apply to the Court for the relief demanded in said complaint.
This 24th day of October, 1940.
R. A. Bullock,
Asst. Clerk Superior Court.
