State Board of Health officials announced that seven cases of proven rabies in dogs and sows have been reported from Columbus county in the southeastern part of North Carolina. Two more cases have occurred in the adjoining county of Bladen. Dr. H. W. Stevens, director of the Buncombe County Health department, reports no rabies has occurred in Buncombe county in over eight years. He also said that Alleghany county, just north of Buncombe county, has reported two cases of rabies occurring in foxes. He strongly urged that all dog owners in Buncombe county have their pets vaccinated and protected against rabies immediately. Buncombe county rabies control officers are holding clinics throughout the area at the present time.

During any dog vaccination clinic, a person may turn in a stray or unwanted dog. Health officials say that stray dogs, unwanted and unfed dogs are the greatest cause for spreading disease among other pets and dogs, such as rabies, hepatitis, and dog worm infection. The Buncombe County Animal Shelter will pick up all stray dogs if a person will confine such and call the radio control tower in the courthouse.

These are some of the things that killed them: Speeding—Driving on the wrong side of the road—Failing to give right of way.
