BY Bill Kiser

Following the end of World War II, President Harry S. Truman took an action that began a battle we are still waging in this country. That action was the establishment of the President's Committee on Employment of the Handicapped, and that battle is for full equality in employment of disabled people. We are

years, to see signs of victory. Improved medical care, both on the battlefield and at home, had led to an everincreasing number of disabled persons--veterans and civilians. The country had to do something. Truman recognized that opportunity for employment offered the

One of the first necessities was a change in attitudes. It was generally thought that people with any type of physical or mental impairments had to be taken care of for the rest of their lives. If they had families, the physical and economic burdens fell there. If not, institutionalization--with the

expenses borne either by Town manager's report

> petween 1 p.m. and 5 p.m. only. The shelter is open seven days a week. 7. You must pay a boarding charge of \$1 per day to the animal shelter 8. If your dog has not had its rabies shot, you can pay \$3 to the animal shelter, they will give you a receipt and your veterinarian will administer

THE SLOW VICTORY

beginning, after all these

only realistic hope for the handicapped to have a better

organizartions or public agencies- was the only other option considered. For progress to be made, it was essential for employers and co-workers alike to be educated to the fact that handicapped people could be productive

Im o enough to remember the first publicity efforts regarding employment of the handiciapped. Quite naturally, I hoped these efforts would lead to a job for me. But the picture was not as rosy as it seemed. As my personal attempts to find a job ended in failure year after year, I became cynical. Invariably I was told, "Oh yes. We are employing the handicapped, but no one as severely handicapped as you.'

There will be those who say

it is impossible to find employment for the more severely disabled. Thirty years ago these same cynics were scoffing at the idea that people without arms or legs could work on production lines, much less hold professional or managerial positions. President Carters appointment of a triple amputee as administrator of the third-largest federal agency should lay that belief to rest, for once and for all. By further utilizing the techniques of rehabilitation engineering and job modification, we can look forward to the employment of an ever-increasing number of severely disabled people.

However, their success in the world of work still depends in large part on an understanding public. Scientists and engineers can devise all types of ingenious ways for disabled people to function, but these will be useless unless employers are convinced that disabled individuals can perform the jobs they need

This year there are many

Handicapped Individuals,

In December, 1969, the Black Mountain Town Council adopted a Sub-Division Ordinance which gave the town jurisdiction over the extraterritorial mile. This is the land lying within one mile in all directions of the corporate city limits of the town.

While it must be understood

that no two cities have the same problems; all cities have some common problems. In recent years almost all cities have experienced growth outside the incorporated boundries of their jurisdiction. Not infrequently is the already popular concept of "moving out of the city" enhanced by the provision of water and or sewer services by a municipality. Although many towns in Western North Carolina began enforcing land use and building codes several years ago, very few counties have been strict enough with these controls. Consequently the result of the code enforcement in the towns and the lack of enforcement by the counties, the increasing demand for residential and commercial development outside the town has resulted in outlying areas being without controls. Black Mountain is being surrounded by this uncontrolled, un-planned growth. What specifically is this uncontrolled, unplanned

1. Are the new residences and commercial structures being constructed to the health and safety standards required by the town of Black

2. Are new sub-divisions in the area outside Black Mountain being provided with adequate water, sewer and drainage facilities; are streets properly designed and constructed with adequate provisions for future maintenance and access for emergency vehicles; are lots being sold with adequate space for buildings, wells, septic tanks, etc.?

for

3. Are residentaial, commercial, industrial and other types of development protected from each other: are adequate front, side and rear yard requirements provided; are parking and access being provided new development; does residential property have protection from what may locate next door?

These are just some of the problems associated with areas which do not have land use and building codes adopted and enforced. If people living outside the town answer no to these questions then they are surely aware of the potential consequences of living in an unplanned, unregulated area. Many times these problems are not recognized until several months or years have passed. If a septic tank fails, water pressure becomes inadequate, drainage facilities become inoperable, streets are not maintained, a business or mobile home locates next door or across the street when you were told that the development was sold only for single family homes. More often than not it is too late then because the developer has sold all the houses in the subdivision and moved on.

If the homeowner is aware of these problems and chooses to take the risk that is certainly his right, but what is the effect on the town of Black

Mountain
1. Developers and businesses looking for a way to escape taxes, codes and regulations move outside the city, but still have the advantages of the city dweller such as water and or sewer. The town of Black Mountain loses the tax base and any control over development which may have a direct impact on the town's utilities and services.

2. If these areas which are now developing outside the city limits ever ask to be annexed by the city in order to receive certain utitlities and services, or to obtain maintenance or repair services from the town, the cost may well be prohibitive. Substandard development may cost the town too much to repair or correct improper and inadequate water, sewer or drainage facilities and streets. Areas with buildings which are not properly constructed to specifications, do not have adequate water pressure and wide to various locations. do not have adequate fire Pastures and hillsides are hydrant locations, may, if annexed, jeopardize the town

> s insurance rating. These are just some of the problems which face a town exercising it's building codes, sub-division and zoning regulations in the extraterritorial jurisdiction. The use of the extraterritorial power can provide protection for residences and businesse outside the corporate limits of Black Mountain as well as protection of the town's present and future resources This in no way makes the resident of the outlying area a taxpayer citizen to the cityhe is under no restrictions of the city except regarding building codes. He is still a county resident, but is given the protection of the building codes of the city, thus protecting his own in-

It is the writer's opinion that with the completion of I-40, Black Mountain is going to become a bedroom community to Asheville. The degree of value placed on any ordinance adopted by the town the plant by the N.C. is measured by the reasonable Department of Agriculture, and equitable enforcement regulations. If we value our Agriculture and North town we will protect our best interests.

by Tom Sobol

Extraterritorial zoning

Due to the growth in residential, commercial and indistrial building, zoning has become an essential tool to control and protect persons and businesses. I recognize its importance and stand firm in our efforts to enforce it. However, we should not let time dull our memories to one of the most important lessons in history - the Boston Tea Party. Just as they revolted because of taxation without representation, I stand opposed to government zoning

without representation.

Zoning involves many restrictions - too numerous to elaborate on each one, therefore we should focus on those which have the largest impact on our citizenry and which proponents of extra-territorial zoning imply are not controlled outside our corporate limit area. When speaking of zoning we

must be sure that we are knowledgeable of those areas already covered by strict county ordinances. Health and safety are two of these areas where developers and in-dividual builders are strictly regulated and must build according to the regulations established and enforced by the county's Department of Public Safety. This means that before a well can be dug or a septic tank installed, the County Health Inspector must give his approval which only comes after several inspections and meeting their rigid requirements. As for safety, the county building inspector must inspect all footers, etc., electrical in-spections must be made and tagged, plumbing inspections must be made and tagged, plus the entire structure must meet or exceed the requirements set up by the

IF YOU THINK IT DOESN'T MATTER **HOW MUCH ENERGY YOUR HOUSE USES,** TRY MULTIPLYING BY 57 MILLION.

For some six years now, we at CP&L have been talking about ways that you can cut down on your energy bill.

Now, to prove that they work, we've put together some figures, based on the following assumptions.

The houses are exactly the same: 1500 square feet, and a family of four. Both are fully equipped with appliances and central air conditioning.

The house on the left side has storm windows and doors, and proper insulation. During the summer, the thermostat is set at 78°. In the winter, it's set at 62° at night and 65-68° during the day. The family is also very careful about using hot water and appliances.

The house on the right has no storm windows or doors, only standard insulation. The thermostat is set at 72-75° during the summer months; 72° during the winter months. The family practices no energy conservation.

In a year, the house on the left uses about 28% less BTU's (units of energy) than the house on the right.

So you can see how you can save money. And, just as important, you can affect the whole country's energy supply when you consider that there are 57 million homes in America today. If every home conserved energy like the one on the left, this country could save over 337 million barrels of oil in a single year.

And that's a sure way to help control

this country's energy situation in the future. For more information on insulating your home and other ways of cutting down on your energy bills, stop in or call any CP&L office. Data based on calculations developed by CP&L Energy Services for average heating and cooling degree days for CP&L service area.

begins

Members of the Beef Cattle Commission of the Western North Carolina Development Association have launched an attack aimed at eliminating the existence of the multiflora

In a resolution adopted during a recent meeting, the commission accuses the rose of being a severe pest and removing thousands of acres of Western North Carolina land from production, resulting in a major economic loss to the area. Control of the rose, according to the resolution, has placed an economic burden upon farmers and livestock producers. The "widespread distribution of this pest plant in future years will pose a severe threat to the areas livestock industry and be detrimental to good usage of the areas land resources,' the resolution

The multiflora rose was introduced throughout Western North Carolina as a wildlife habitat, natural fencing and conservation plant. It can be seen along roadsides throughout the area. When introduced, indiscriminate spreading of the plant was not forseen. However, it has been shown that birds and other wildlife, after eating the fruit of the

plant, spread the seeds far and becoming covered in many localities. Removal of the plant is difficult and costly,

Hal Weir of Asheville, commission chairman, stated the plant can be controlled and eliminated by chemicals. Weir said this has been amply demonstrated on test plots in Western North Carolina by the N.C. Agricultural Extension Service and scientists of N.C. State University. However, chemical eradication is extremely costly to the landowner, especially when the same land may become reinfested with multiflora roses existing along highways and in neighboring fields. The commissions petition,

which was sent to various local, state and national governmental agencies, urges permanent stoppage of the planting of the multiflora rose along highway rights-of-way and the eradication of existing plants by the N.C. Department of Transportation. ditionally, the resolution calls for a joint study and broadscale eradication program of the U.S. Department of Carolina State University.
