CHIROPRACTIC FOR BETTER HEALTH
THE CHIROPRACTIC X-RAY
If your examination includes an x-ray, there are usually two important reasons why a doctor of chiropractic will do this. First, he wants to be sure there are no complications in your case that might prevent or delay recovery. Using the x-ray picture, he can see if there are any obvious signs of fractures, malformations, or diseases present. This helps him decide whether to accept or refer your case.
If there's nothing present to prevent the results you're seeking, he'll look for the cause of your condition and determine how it can be corrected. His prime area of search is for misalignments of the spinal vertebrae. Any pressure or irritation to the nerves within the spine or as they leave the spine may cause health problems in other parts of your body, depending where the affected nerves extend. Through a gentle chiropractic adjustment he can correct any misalignment and remove the nerve pressures and irritations that are causing problems. This can relieve the pain without recourse to drugs or surgery.
