The Outstanding Chevrolet of Chevrolet History

-with Marvelous New Bodies by Fisher!

Only a short time has elapsed since The Outstanding Chevrolet was introduced—but already it has swept on to one of the greatest triumphs in automotive history. Never before has the American public so overwhelmingly endorsed a new Chevrolet—for never before has there been provided, at prices within the reach of everyone, such a generous measure of beauty, comfort, performance and dependability!

New Fisher Bodies
The marvelous new bodies by Fisher—longer, lower and roomier, with all closed models equipped with adjustable driver's seat that may be moved forward and back for proper driving comfort—represent one of the most valuable contributions ever made to motor car comfort and beauty. The hood streams back from the rugged new chromium plated radiator in straight, unbroken lines and blends flawlessly into the body contours. Body moldings divide at the cowl line—giving a paneled effect to the cowl and hood that is both distinctive and pleasing. Concave front pillars lengthen and smarten the profile. And distinctive new Ternstedt hardware lends a final touch of custom elegance.

New Six-Cylinder Motor
The great new six-cylinder valve-in-head engine was developed from more than a hundred motors that were built and tested over a period of four years by Chevrolet engineers. Not only does it develop 32% more power than any previous Chevrolet engine... not only is it sensationally faster and swifter in acceleration—but it performs with a smoothness and quietness of operation that are almost unbelievable in a low-priced automobile.

It fits along in the traffic line with remarkable ease and quietness. It leaps ahead at the signal light like an arrow from a bow. It takes the hills, no matter how steep, with truly astounding ease. And it delivers this amazing performance with an economy averaging better than 20 miles to the gallon of gasoline!

New Comfort and Handling Ease

But sensational as this performance is—it is matched in impressiveness by the marvelous comfort and handling ease that have been engineered into the chassis. The heavy, rigid, channel steel frame extends beyond the entire length of the body and rests on four semi-elliptic shock-absorber springs—set parallel with the road. The front springs are 36 inches long and the rear springs 54 inches while all spring shackles are equipped with Alemite fittings.

The steering mechanism is designed with ball bearings throughout, with complete lubrication at all points of contact. Brake pedals are correctly spaced for easy and safe manipulation. The two-beam headlights are controlled by a foot button located on the floor boards. And a slender, flat-type steering wheel fits snugly into the hands.
