FEARS FELT FOR FRUIT CROP IN BLUE RIDGE
Blowing Rock.—A third freeze since the fruit trees bloomed here occurred Thursday night and threatened to destroy whatever of the crop was left by the two previous freezes. Although snow fell during the night, the freeze was only a light one. Temperatures were only slightly lower than normal, but a hard wind was blowing.

Twenty Ways To "Make a Million"

Babson Lists Score Of Opportunities For Ingenious To Get Rich.

New York.—Roger W. Babson, the industrial statistician, reveals in the issue of The Forum 20 openings for the ingenious to acquire affluence: a score of ways of making a million in what might be thought an overcrowded world of invention. Here is his list as published in The Forum:

1. A new automobile which will use a rotary engine, go sidewise as well as forward and backward, and be gearless. Mr. Babson predicts that this device will come inside of 25 years; its engine cylinders ranged in a circle, with an exhaust pipe emptying on the roof. The sidewise movement will serve convenience in parking.

2. A Diesel engine for automobiles that will use crude oil, which is far cheaper than gasoline, not having to go through any refining processes. He prophesies its appearance. "The man who does it first will make more than a million."

3. A practical and foolproof helicopter—that is a device that will lift an airplane directly off the earth, and do away with the need for starting and landing field, enabling the aviator to light on city building roofs or the decks of shops without difficulty.

4. A light that will pierce fog, something greatly needed in the field of air navigation. Until this is discovered Babson holds commercial aviation will be dangerous.

5. Gliders for children. Babson predicts that these will be some time as plentiful as toy wagons and bicycles and "little boys and girls will fly around their yards as safely as they now play in their sand piles."

6. New sources of power—from the sun, the tides, and the heat of the earth. These are the big sources remaining to be tapped. Coal, says Babson, is nothing but a reservoir of energy stored up by the sun ages ago, while the evaporations caused by the same luminary give the world the flow and the power of falling water. To use the sun's heat directly is to be the next great human exploit.

7. A new electrical development exploiting the short wave lengths.

8. Fireless cities. Babson would have some man get rich by sending heat to houses direct from mines or generating sources close to power sites. "In fact," he says, "the day may come when it will be illegal to keep a coal fire burning in our cellar."

9. Cold light which will do away with 95 per cent of the electric current now wasted on resistance to create the glow.

10. Central cooling systems, on the plan of central heating and lighting plans.

11. Electrical clocks. He expects time to be on tap like gas or water.

12. Horizontal elevators that will subjugate the labyrinths of department stores.

13. Talking books—that is pages that may be fed into a machine and save the bother of reading.

14. Ready-made subways, smaller in size but of easier construction, being made in cast sections, ready for installation.

15. Grass paper that will substitute the annual product of the soil for trees that take from 50 to 100 years to grow into wood pulp size.

16. Pills for plants—some condensed form of fertilizer that will do away with wasteful spreading and supply the needed help to plant life economically and directly.

17. Flexible, unbreakable and bullet-proof glass.

18. Synthetic foods. These are fast on the way, milk, cream, butter and cheese already come as by-products of petroleum. Synthetic vegetables have been devised that outgo nature in vitamins, while eggs can be made direct from grasses.

19. Mahogany lumber from native hard wood trees, by inoculating them with dyes and chemicals that shall make them take on the qualities of this tropical product.

20. A tooth powder that will prevent the decay of teeth.

GRADUATION GIFTS

Jewelry makes an ideal graduation gift. We have a fine selection of miscellaneous gifts and you can easily select something appropriate from our large stock of quality merchandise. Our prices will please you.

Wrist Watches, Bar Pins, Diamond Rings, Brooches, Necklaces, Bracelets, Mesh Bags, Fountain Pens and many other appropriate items.

"THE HOLE IN THE WALL"

A story, wonderfully presented, as wonderful as it is strange and new.

THE STORY

The title refers to the tiny and uncertain cranny in the wall which separates this visible world from the great beyond, and through which certain gifted mortals at certain intervals perhaps, can glimpse the great unknown.

A new theme, new treatment—a picture that you'll never forget.

NOTICE

There is now in process of organization a purely mutual fire insurance company for this immediate section to be known as the

MERCHANTS AND GINNERS FIRE INSURANCE CO.
