Plan Set-Up For Making Crop Loans In All Counties

Advisory Committee Of Three To Pass Upon Loans To Farmers From Corporation. (Special to The Star.)

Raleigh, Jan. 11.—An advisory committee of three persons in each county, or smaller unit when desirable, to pass upon local credits and to serve without pay, and an attorney for each county are now being named to aid the Regional Agricultural Credit corporation of Raleigh, in making loans. John P. Stedman, executive vice president and manager of the unit, announces.

Already, Mr. Stedman states, he has completed the personnel in the Raleigh bank, having had about 4,500 applications for about 50 jobs. The force includes J. I. Sutphen, Columbia, S. C., secretary-treasurer, six stenographers, three examiners and six inspectors, largely in the field in North Carolina.

Loans of \$25,000 have already been made in North and South Carolina, from the Raleigh bank, and do not come from Washington, Mr. Stedman states. The loans are on growing or to be planted crops, of farmers or truck growers, poultry and cattle, and differ from seed loans in that they are made on the crops, cattle or poultry, but real estate must also be included in the mortgage as collateral.

Farm agents in each county have been supplied with application blanks and are asked to aid the farmers in filling them out, or forms may be secured by writing the Raleigh bank. The only cost is a 50-cent notary fee, the object being to hold down the cost to the borrower as much as possible. The interest rate is 5 1-2 per cent with an additional one per cent inspection fee, which is subject to reduction, if the cost of inspection is less.

The procedure to secure a loan follows: Secure application blanks form from county farm agent or Raleigh office, fill in and file mortgage form with local advisory committee, which passes on it and sends it to the Raleigh bank. It is then sent to a local inspector, who checks up on it and reports, returning it to the Raleigh office. If approved all along the line, the Raleigh bank mails out a check for the amount. Loans are for one year or less, payable at the time the particular crop or product is marketable, Mr. Stedman explains.

Private Business Methods Might Not Work So Well In Government

That Theory Not Faring So Well Now. Operating Cost Not So High.

Washington.—The theory that private business is vastly more efficient than the government is not faring as well as it did in the days when large corporations were making money hand over fist.

Argument as to that point is beginning all over again. The visit of President-elect Roosevelt and Senator Norris to Muscle Shoals, center of a long fight between advocates of government ownership and those of private operation, draws renewed attention to it.

So do such developments as the report of the Committee on Social Trends with its suggestion of social-economic planning and the popularization of technocracy with its inevitable vision of a controlled economic structure.

Several competent students have recently hurled spears at the notion that government is not to be trusted in any form of business, even to the point of insisting that the cost of operating the federal government itself is relatively low.

Even the berated farm board, whose stabilization operations appear to have cost two or three hundred millions, is defended by comparison with private business in an analysis by William F. Schilling, one of its members.

Schilling compares the young farm board with older, seasoned industrial groups, points out that the board ran head-on into the depression almost as soon as established

Private Business Methods Might Not Work So Well In Government

and says that although it is contended the board's capital structure has been reduced 63.4, a list of 421 industrial stocks shows an average decline of 78.5 from the 1926 index in reports of the Standard Statistics company.

Also, he says, the board was forced by law to take a secondary position on all loans. So Schilling suggests it might be a good idea for the farm board to take over industries for operation.

Then there's Judge George W. Anderson of the federal bench, former interstate commerce commissioner and U. S. district attorney, who suggests a 15 billion dollar government corporation to take over the railroads on the theory that they can be run more efficiently that way.

Comes also Dr. Isador Lubin, a widely-known economist of the Brookings Institution, who contends that federal government would appear far less expensive and treasury deficits almost non-existent if the treasury did not charge to current budgets investments of a permanent or long-time character.

Public construction charges should be spread over the life of the projects, he says, and the loans charged on a separate investment

David Lawrence, editor and writer, who proclaims that the real cost of the civil government of the United States is only \$545,000,000 despite the 1933-34 federal budget of \$3,500,000,000. The rest goes for the public debt, veterans, army and navy and the postal deficit which could be eliminated.

The real point in that breakdown of expenses is that it shows that the actual cost of operating this government represents only about one per cent of the national income.
