

Mt. Sinai News Of Current Week

Revival Meeting Closes; Singing School In Progress at Mt. Sinai.

(Special to The Star)
MT SINAI, Aug. 3.—The revival meeting here closed Sunday morning. The Rev. Evans Crawford of Bunn, N. C. who assisted the pastor did some fine preaching. Several persons joined by letter, none was baptized.

A singing school, led by Charlie Greene of Cliffside is in progress this week. The singing began at two o'clock in the afternoon and lasted until six o'clock. The community is invited to attend.

The guest of Mrs. L. C. Putnam Sunday were: the Rev. and Mrs. Evans Crawford, Mr. and Mrs. Andrew Hunt of Shelby; Mr. and Mrs. Gay Putnam of near Gaffney; and Miss Buna Rollins also of Gaffney. Mr. and Mrs. R. O. Ellis had as their guest last week Mrs. Ida Isenburg and Miss Pauline McSwain of Swainville.

Mr. and Mrs. Jessie Clary of Boiling Springs were guests of his parents a day or so last week.

Mr. and Mrs. Webb Hunt and son Webb, Jr. of Gaffney spent Sunday with Mr. and Mrs. Dewey Rollins.

Mrs. Lewis McSwain of Swainville spent a few days last week with Mrs. L. C. Putnam.

Mr. and Mrs. Olive Moore of Shelby and Mr. and Mrs. Thurman Hamrick of Poplar Springs visited Mrs. W. L. Harrill Sunday. Mrs. Harrill is improving some.

Bethlehem Section News Of The Week

The young peoples division enjoyed a lawn party last Thursday night at the home of Miss Violet Goforth.

J. N. Smith who has been in the Shelby hospital for past ten days is greatly improved and expects to return home Tuesday.

A perfect bone needle 25,000 years old, was discovered by Jean Casadesous in excavating at Ganties, in the south of France.

Have You A Budding Genius In Your Home?

By EDWARD LEE HAWK
Human Analyst and Vocational Advisor.

A little while ago I met an old friend that I had not seen for quite some time. He is the father of two boys whom I have always considered very bright lads. I was always very fond of these boys and I immediately inquired about them. The father had always been very modest when referring to his boys, but on this occasion he could not hide his great pleasure and pride when he told me that the eldest one had recently been examined by a number of psychologists at one of the large universities who put him through a series of intelligence tests and had pronounced him a genius.

It is perfectly natural for parents to be proud of their offspring and even to feel that their children, are especially bright, but what a thrill must come to the parents who discover that they really do have a "budding genius" in their home.

Several years ago I was speaking in a city in Indiana and a mother asked me to say a few words relative to the proper vocation for her son who was then in high school. Friends had already advised that he should be a mechanical engineer. I discovered, however, that he had very little natural adaptation for such work, but that he did have a strong natural bent toward Art. I, therefore, advised that he become an artist. A number of years elapsed during which time I had not seen or heard from either the mother or the son, but upon returning to their city I again met the mother and inquired about the boy. She told me with a great show of pride that he was an artist in New York and extremely happy and very successful in his work. This is another instance where there was a "budding genius" in the home but the parents did not know it. The fact had to be pointed out to them.

No doubt there are thousands of homes where there are children who possess all the mental and emotional qualities of an undeveloped genius, but whose possibilities have not yet been discovered. The great question is "Will they ever be discovered?"

Dr. Cox, psychologist of a great western university says: "It is quite possible that just as many geniuses have remained mute, inglorious Miltons, in the past, as have actually come to light."

Parents or teachers cannot create and give talent, or the qualities of genius, to a child after it has come into this world, but they can help greatly to develop the talents that nature has given it. On the other hand they can discourage and even completely suppress such development. A child may develop an interest in, and get all "worked up" over this or that, but because the parents have little or no interest along that line they show very little sympathy for and no enthusiasm over his "big idea" and, therefore, give him no assistance in working out his all consuming problem. Oftentimes they even argue with him, telling him he is "all wet" and that his ideas can't be worked out, that many others have tried it and failed, and some have even gone crazy over it. Such conduct on the part of parents or teachers is most sure to suppress and inhibit the development of any genius in the child.

During the last twenty years I have had much experience dealing with people and it is my judgment that the reasons so many "grown-ups" have accomplished no more than they have is not because they did not possess great natural ability, and in many cases qualities of real genius, but because they were not encouraged to express and develop those qualities. The Law of Nature is: "If you have talent, you

RECOGNIZING THE GENIUS

The writer of this article is in Shelby giving a series of talks on "How To Understand and Deal With People," one of which will be given next Sunday afternoon at 3 o'clock in the county court house, the subject of which will be

"Recognizing the Genius" This talk will be especially interesting to parents and teachers and young folks who want vocational advice. Mr. Hawk will make platform analyses of some children so bring the "kiddies" along.

This talk will be of especial interest by the Cleveland Star and the Shelby Chamber of Commerce for the pleasure and benefit of the general public and are free to all who wish to hear them.

must use it or lose it."

Grown-ups differ mentally and emotionally and so do children. Adults have different interests in life, different likes and dislikes, and so do children. It is a common error on the part of parents to want their children to be interested in the things they the parents are interested in. This order of things should as a rule be reversed, and the parents take an active interest in the things that seem to absorb the child's mind.

One of the tragedies of life is that most parents and many teachers have no way of determining what is the natural inborn bent of any child except by the trial and error method. Intelligence tests are frequently used by psychologists, with varying degrees of success, parents cannot give these tests. One very definite way however, of determining the natural talents, traits and tendencies of a child is by its physical make-up. This is a very practical guide for the parent and teacher, if they know what the different physical characteristics indicate relative to mental and emotional qualities and behavior traits.

The illustrations accompanying this article show striking differences in the physical appearances of the children. The boy wearing the large tie has a pear-shaped head and face, dark complexion and straight hair, while the little tot just to his right and with bare shoulders has a very wide head and face, curly hair and medium light complexion. These physical differences alone indicate a number of important facts about the inborn traits of the two children.

The pear-shaped head indicates the mental, or student type of child with a natural inclination toward intellectual and artistic things. The dark complexion indicates a submissive and retiring nature and also a love for beautiful and especially very colorful things. The colors he would enjoy most are cherry-red, deep green, dark blue, orange, purple and yellow. A child with dark complexion and a pear-shaped head is usually less active physically, more serious, less aggressive and less friendly than the wide headed child with light complexion. He will be happy playing alone or with one or two playmates. Such a child is usually very fond of animals and cares more to fondly and love pets than to romp with them.

The child with a wide head will be independent and self-willed and especially so, if his complexion is light. A child with these physical characteristics will be mechanical and constructive and more active than the other type. He will enjoy making things—using tools and materials—and as a rule does not like to study. The best way to get him to study is to show him how he can use what he learns to do the things he wants to do.

Curly hair, especially if it is very fine, indicates an artistic bent and also a very sensitive disposition. Children with light complexion

and wide heads and especially if the head is very high at the crown, like to "show off." The child with a narrow head and dark complexion is not inclined so much that way.

The little girl in our illustrations wearing glasses has a wide head, round face and short neck. These characteristics indicate a domestic or home-loving nature. In mature life she will have a heavy, or "fat" body. A child of this type usually does not like physical work, unless it is to do something of a domestic nature. Such a child is usually quite clever in getting other kids to do things for him.

The other little girl in our illustrations with the broad face, muscular neck and square shoulders is the independent, active type. If she also has very light complexion we would expect her to be the so called "Tom Boy." This does not mean that she would necessarily be rough and coarse, but because of her strong, well built body she

could have a strong desire for much physical action. Because of these traits she would with proper training make a very efficient playground director, industrial nurse, business woman, etc. If her complexion were dark with these other characteristics then she would have the qualities of a successful interior decorator, a practical home nurse, suit or coat sales-lady, domestic science teacher, etc.

It is my conviction based upon many years of high school and college teaching and upon more than 15 years of experimenting and investigating, and studying people, both children and adults, that there are thousands of homes where there is a "Budding Genius," some times two or more, and that if parents and teachers were better informed, along the lines we have indicated, these geniuses would be discovered and developed, instead of being permitted to live and die unrecognized and unknown.

Rehobeth, Sandy Plains News Items

Miss Ledford Weds Mr. Wright; Mary Visitors in Community Personals

REHOBETH - SANDY PLAINS, Aug. 3.—A wedding of much interest to this and adjoining communities took place Saturday July 28th when Dwight Wright of this community and Miss Mattie Lee Ledford of Casar motored to Gaffney, S. C. and got married. Both bride and groom received their education at the Polkville High School. Mr. and Mrs. Wright are making their home with the groom's parents at the present.

Mr. and Mrs. Theron Jones and daughter, spent last week with Mrs. Jones' parents, Mr. and Mrs. Bailey Mauney of Race Path.

Mrs. Martha Jones of Gaffney spent Tuesday night and Wednesday with Mr. and Mrs. Jessie Jones.

Miss Lorena Holland spent the latter part of the week with Mr. and Mrs. Oscar Holland of Shelby. Jessie Jones, Troy Wiggins, D. J. Allen and George Jones spent Friday at Bridgewater.

Misses Lillian and Charlene Greene entertained a number of their friends with a party Saturday night.

Mr. and Mrs. Yates Jenkins and son, of Ellenboro spent Thursday with Mrs. Lula Jenkins.

Those visiting at the home of Mr. and Mrs. Ralph Greene Sunday were: Miss Clarice and Billie Hall of Asheville, Mr. and Mrs. Robert McComes of Polkville, Mr. and Mrs. June Crowder of Lattimore and Miss Virginia Jenkins.

Mr. and Mrs. Walter Crofts and children and Mr. and Mrs. D. W. Jenkins spent Sunday with Mr. and Mrs. Frank Jenkins of Poplar Springs.

Miss Cloe Williams of Beams Mill spent the week-end with Mr. and Mrs. Clarence Grigg.

Miss Macie Mode of Buffalo is spending several days with relatives of this community.

Mr. and Mrs. L. Z. Grigg and daughters Millan and Landis spent Monday afternoon with Mr. and Mrs. Blucher McCraw of Grassy Pond.

NEARLY HALF MILLION IN STEEL INDUSTRY

NEW YORK, Aug. 2.—The American Iron and Steel Institute reported today that employment in the steel industry during June reached the highest level in four years, with 455,966 workers employed.
