Sea Grant's Focus Of Special

Television viewers who want to learn more about controlling beach erosion, shedding crabs or breeding clams can now go straight to the experts. N.C. State University's Broadcast Services for N.C. Public Television are presenting a television series titled Search, which focuses attention on scientists and researchers in the state university system and elsewhere in the state, according to a news release.

An episode on UNC's Sea Grant program is scheduled to air Tuesday, Jan. 21, at 7:30 p.m. on WUNJ Channel 26, the Public Broadcast Service (PBS) affiliate in Wilmington. Subscribers to Atlantic Telephone Membership Co.'s cable system can watch the series on cable channel 12, while households receiving service from Vision Cable of N.C. can tune in on cable channel 13.

During the 30-minute program, Sea Grant coastal engineer Spencer Rogers of Fort Fisher discusses break-water-marsh as a method of erosion control, while marine advisory agent Skip Kemp talks about clam breeding and shellfish management, and marine agent Wayne Wescott discusses crab shedding.
