# SIMON'S

"STORE OF VALUES" HERTFORD, N. C.

# 3 SHIFTS (a single start) can use 1/3 of a mile of gasoline

Today's short trips waste your money unless your gasoline has these Three Kinds of Power...

YOU wouldn't like to drive 3 MILES in low gear... yet you often do just that in an average week's stop-and-go driving!

Figure out the number of times you shift gears in those daily "errand drives"—to the office... the bank... the school... the club!

Then remember that the rapid acceleration of your motor as you "shift" can use 33% more gasoline than steady running.

Also, you move over a TON starting from a dead stop... and you often do this 30 times a day! So your gasoline must have power for HARD PULLING.

But for economy in today's stop-and-go driving, just one kind of power—PULLING—isn't enough! You must also have power for QUICK STARTING... for STEADY RUNNING. And these 3 kinds of power must be in PERFECT BALANCE!

Super-Shell is the FIRST truly balanced gasoline. With its 3 kinds of power, it cuts driving costs 3 ways:—

**STARTING**—With its even volatility, Super-Shell can save up to a cupful of gasoline on every "cold" start.

**PULLING**—Super-Shell can save up to a cupful of gasoline in 10 minutes of hard pulling, or rapid accelerating, or on hills.

**RUNNING**—With its abundant heat units, it can save up to a cupful in every hour of steady running, many motorists report.

Remember, when you save 16 cupfuls you save a whole gallon of gasoline.

There are over 30,000 Shell stations to serve you from Coast to Coast. Stop at one of these stations, and start saving TODAY!

*Saves on today's stop-and-go driving*
