

Conservation Of Wild Life Very Important

College Station, Raleigh, June 25.—Florida and Georgia have been added to the territory of George B. Lay, rodent control leader at N. C. State College, it was announced today.

With Virginia and the Carolinas already in his field, Lay's work will now cover five states. His headquarters will remain at State College, Raleigh.

The work is conducted by the bureau of biological survey of the U. S. Department of Agriculture in cooperation with the State College extension services of the five states.

Although he will be concerned mainly with rodent control work, the bureau has instructed him to give considerable emphasis to the conservation of wildlife, Lay stated.

The conservation of wildlife, he said, is becoming more important, in view of the fact that as the country's population becomes more dense, wildlife has a tendency to die out unless given special protection.

Much of his work in the future will be concerned with promoting rodent control campaigns and wildlife conservation work, although he will not be able to give as much personal supervision to the campaigns and conservation work as formerly.

Lay plans to prepare written instructions that will serve as a guide to individuals taking part in control campaigns and conservation work.

BETHEL NEWS

Mr. and Mrs. W. D. Perry and son, Dewey, Jr., spent Sunday with Mrs. Perry's parents, Mr. and Mrs. W. W. Chappell, at Belvidere.

Little Miss Barbara Ann Benton, of New Hope, is visiting her grandparents, Mr. and Mrs. R. R. Keaton, Thomas Phillips, of Miami, Fla., is visiting his parents, Mr. and Mrs. C. T. Phillips.

Everyday Cooking Miracles

BY VIRGINIA FRANCIS

Director Raleigh Electric Cookery Institute

Remember when you learned to drive a car—how you watched and silently rehearsed the operations of starting, shifting, and stopping as explained by your patient male instructor?

At first, perhaps, you rather wondered at the number of things you thought you had to remember; but when you visioned yourself gliding

The thrill of learning to cook on a new electric range is equalled only by the thrill that comes with learning to use any new thing that is presented to you.

smoothly down the boulevard in your handsome, new, shiny car, waving and nodding nonchalantly to your pedestrian friends, you were fervently determined to master that "low, second, high" technique! Then, when you did "take it out alone," and found that the car reacted easily to your well-memorized maneuvers, you gained the confidence of a Barney Oldfield. And you've been driving ever since!

Isn't that the case when learning to use all new things? You approach them with an adventurous, somewhat shaky attitude; then when you discover just how easily they operate, and how convenient and enjoyable is their use, you wonder how in the world you ever got along without them. So it's the "new" which makes life interesting, and it's the whole-hearted acceptance of new things which makes for real progress.

Symbol of Progress

In the field of modern cookery, the new automatic electric range is the symbol of progress. It is the range of the present age—the range which makes cooking scientific, safe, simple, and successful.

Homemakers who have been "brought up" by cooking on old wood stoves and temperamental kitchen ranges might eye the modern electric range with an "I'm too

old to learn" look. However, no one is too old, or too busy to learn to cook electrically. When you purchase a new electric range, you don't have to learn to cook all over again. (Goodness knows how the family suffered the first time). Aside from learning how to operate a few simple switches, all you have to learn about cooking on this new

servant is to expect perfect results every single time. You may need to get accustomed to having so much "spare" time but you'll surely enjoy producing real cooking miracles.

For example, how would you like to prepare a complete oven meal for baking (using, of course, your own trusty recipes and cooking "secrets"), place this meal in the oven, go away for the afternoon, come home and find it deliciously cooked and ready to serve? That is cooking by "proxy"—a bit of convenient cookery magic made possible by the "chef's brain," or timer clock, and the well-insulated, heat-controlled, moisture-controlled electric oven. The electric oven is also responsible for one-step meat roasting and baking, the new method of starting meats and cakes to bake in an unpreheated oven.

Many Miracle Features

Other miracle features of the electric range are the thrift cooker, the large 6-quart kettle installed in the top of the range which cooks foods to a delicious doneness economically, slowly, and without requiring attention during cooking; the control surface units which have fast measured, electric heat and the quick, smokeless broiler pan which actually broils foods in such a way that the fat cannot smoke, burn, and spatter over the entire oven.

The SNAPSHOT GUILD

"Off-Guard" Photography

Patient and strategic stalking of the subjects until they were "off guard" netted these interesting snapshots.

TAKING snapshots of people when they are not aware that they are about to be "shot," thereby catching them with natural expressions and in unposed positions, is often called "candid" photography, but we of The Snapshot Guild like the words "off-guard" photography as more truly descriptive.

"Candid" implies there is that kind of expression on the face of the subject and it may not always be there, but there is no doubt that for a natural expression he must be "off guard" at the moment the picture is made, which is also just what the professional photographer waits to capture in making a studio portrait.

"Off-guard" photography is lots of fun, but there are important points about it that need to be observed to get satisfying results. You can't "shoot" thoughtlessly without regard to the direction and strength of the light, nor can you forget that exposure and focus are just as important as for a premeditated pose. Nor should you overlook background. This means that if you are going to catch your subject unawares, you may have to do some strategic stalking for the right position.

Supposing, for example, you want a picture of Grandpa outdoors amonging one of the children. First, observe the intensity of the light and

where it will come from when you take the picture. Then, set your lens aperture and your shutter speed accordingly. Watch your subjects from a distance with your camera concealed. Be patient but alert for an interesting situation to develop. When you see the picture you want to take, locate the spot from which you are going to take it. Then, unless yours is a fixed focus camera, measure with your eye the distance from that spot to Grandpa and the youngster, set the pointer at the right mark, and, keeping the camera behind you until you get there, stroll up and shoot. If they look up at you before you get there, be nonchalant and wait for them to resume their activity, or make some casual suggestion that will put them "off guard." You see, in order to be a good "off-guard" snapshotter, you have to be "canny," and this exercising of strategy to prevent people from posing is part of the fun.

Of course, you must know the capabilities of your camera. A camera with ultra-fast lens and shutter, plus super-sensitive panchromatic film, greatly increases your range of opportunity especially for fast action, but the ordinary camera, too, will make "off-guard" snapshots if the movement of the subject is not too rapid.

JOHN VAN GUILDES

LOCAL NEWS

Guy Newby, Jr., has returned from a trip to Nags Head.

Mr. and Mrs. Herbert Nixon spent last week at Nags Head.

Miss Annie Comer Davis, of Huntington, W. Va., is the guest of Mrs. Clyde McCallum.

Mr. and Mrs. Chas. Whedbee, Mrs. R. M. Fowler, Miss Frances Fowler and Miss Marjorie Hefren spent Sunday at Nags Head.

Miss Gladys Hamrick and Miss Blanche Everett spent the week-end visiting at Chadbourne.

Mr. and Mrs. Lawrence Spivey, of Richmond, Va., spent the week-end with Mr. and Mrs. J. G. Roberson.

Mrs. V. N. Darden and her daughter, Florence, have returned from a visit to relatives at Greensboro.

Mrs. J. R. Futrell and her little son, Richard, Jr., have returned to their home at Rich Square after a visit to Mrs. Futrell's parents, Mr. and Mrs. R. D. Elliott.

M. S. Elliott, who holds a position in Fenner, California, is spending his vacation with his family in Hertford.

Miss Ruth Robinson and Ben Robinson, former Hertford residents who now live at Roxboro, spent the week-end with friends here.

Miss Katherine Broughton is attending summer school at Duke University.

Mrs. T. J. Nixon, Jr., who underwent an operation at a Norfolk hospital last week, is convalescing satisfactorily.

Mrs. Walter Dail and her little daughter, Rebecca, former residents of Hertford, who now live at Murfreesboro, are visiting Mrs. J. E. Morris and Mrs. L. R. Crawford, in Hertford.

Miss Winifred Holland, of Holland, Va., was a recent guest of Miss Pat Edwards.

Mrs. George Paul, of Washington, N. C., was a recent guest of Mrs. J. G. Roberson.

Mrs. Ralph E. White has as guests this week Misses Hilda White and Edith Mathews, of Suffolk, Va.

MRS. TOMMY MILLER AND MRS. CHAS. JOHNSON HOSTESSES

The Rosa Powell Circle of the Hertford Baptist Church met Monday evening at the home of Mrs. T. E. Raper with Mrs. Chas. Johnson and Mrs. Tommy Miller as hostesses.

After the business meeting and an interesting program, a social hour was enjoyed. Dainty refreshments were served.

Members attending included the leader, Mrs. Chas. Johnson; Miss James Tommy Miller, W. E. Hoffer, Molly Perry, S. C. Godwin, B. W. Pennington, D. Spivey, T. E. Raper, V. A. Holden, E. A. Byrum, Bill Elliott, Mary Parker, George Chappell, and Lula Lane.

Visitors were: Mrs. Monroe Hoffer, Mrs. Thomas Tillery, Mrs. Charlie Umphlett and her son, Thomas Edward.

The July meeting will be held with Mrs. Lula Lane at her home.

So New... So Amazingly Different...
..it changes all your ideas about refrigeration

WHAT MAKES COOLERATOR SO REMARKABLE?

IT'S AIR CONDITIONED!

SO NEW BECAUSE..

COOLERATOR is air conditioned.

Crystal-clear, taste-free ice cubes can be made in only five minutes.

Keeps foods naturally fresh, no mingling of food flavors, no drying out of foods, no covered dishes necessary.

Coolerator uses ice, but in a totally different way; maintains uniform cold temperature whether the ice chamber is full or nearly empty. Coolerator needs to be re-iced only once every four to seven days.

There's a Coolerator model for every domestic and commercial purpose, each one complete with patented Air Conditioning Chamber Dialux finish, beautiful chromium trim. Coolerator gives better, more economical refrigeration.
