### SEA KEEPS PUSHING LIGHTHOUSE AROUND

Century Old Contest With Hatterns Continues.

"The recently abandoned light," a brick structure, succeeded the old tow-er. It was built only slightly more than a mile tuland, but the sea has taken 66 years to come dangerously near it. One reason for the slower progress of the waves to the second structure was the repeated attempts of the government to fight back. One device to prevent erosion of the coast was interlocking sheet steel piling driven into the coastal sands. A new steel tower has been built another mile inland and the battle is on again.

"The whole contour of the eastern coast of the United States is constantly being changed by the sea which cuts away some beaches and builds up others. The average force of the Atlantic waves in winter is estimated at from one to three tons per square foot.

"Cape Charles, Virginia, is one of nature's most active seacoast battle grounds. In 1827 a lighthouse was built 700 feet from the shore. It was deserted in 1863 because the site was undermined by erosion. A second tower, built the following year farther inland, was also undermined and abandoned. In 1895 a third tower was built nearly a mile from shore. This tower, a skeleton iron structure, is still

"Neptune has been no respecter of geography in wielding his chief weapon against lighthouses—erosion. The Cape Canaveral light on the east coast of Florida; the Hunting island light, South Carolina; and the lights at Cape May, New Jersey, and Sand Island, Alabama, are among those that have succumbed to the sea's invasion.

"The abandoned tower on low-lying Cape Hatteras was the tallest in the United States, being 193 feet from its base to the top of its lantern, but it was not the country's highest light. That honor goes to the light at Cape Mendocino on the coast of California. The squat tower is itself only 43 feet high, but it is on a cliff about 379 feet above high water. This light, of 130,-000 candle power, is visible 28 miles.

"The country's most powerful coast-light is located at Navesink on the highlands south of New York harbor. This is a huge electric light of 9,000,000 candle power. Since it is only 246 feet above sea level, it can be seen only 22 miles out to sea, however. The proper elevation of lighthou Lights must have a reasonable elevation above sea level to overcome the curvature of the earth; yet if built too high, they may be obscured by fog.

#### Electricity Used.

"Most of the major seacoast lights today use electricity, although incandescent oil vapor, and oil wick lamps are still used extensively in harbor and river lights. The lights are intensified by large lenses. Both lights and lenses are protected by outer lanterns of glass. The earliest lighthouses burned wood, after which coal, candles, whale oil, kerosene, acetylene gas, and electricity

were successfully introduced.
"The first United States lighthouse in this country is at Sandy Hook, New Jersey. It had been in operation 12 years when the Declaration of Independence was signed. Its stone and brick walls are seven feet thick at the base. While lighthouses have been built of stone, brick, wood, and iron, most of the modern structures are of

"The first United States lighthouse exposed to the open sea was that on Minots Ledge, a reef off Boston which had long terrified mariners. An iron-frame lighthouse, built there in 1848, frame lighthouse, built there in 1848, was lost in a gale one year later, and was replaced by a stone structure which was completed in 1890 and is still in use. Burt breaks against its base, and in stormy weather, the waves dash almost to the lautern.

"At the more prominent and dangerous points along the seaboard, rivers, and lakes of the United States and its

possessions, are located 525 lighthouses with resident keepers. The United States lighthouse service employs 1,100 lighthouse keepers, only one of whom is

#### Biblical Actor Is

Honored by France

Parla.—The French of the Legion of Honor. Joube has just been made a Chevaller of the Legion of Honor. Jaube has played the role of Christ in hundreds of medieval mystery playe during the last ten years.

In the open-sir theater in front of Notre Dama cathedral last year, 125,000 persons saw him impersonate Jesus This year loud apendent will make suddle every word of "The True Mystery of the Faulto" which will be presented caring the Early festival. Joule

William Lewis Tilley, of Norfolk, Va., is visiting his grandparents, Mr. and Mrs. W. E. Hoffler.

FIRST GRADE QUALITY - The new Firestone Standard Tire is built of first grade materials by skilled workmen, in the world's most efficient

**GUM-DIPPED CORD BODY** — Every cotton fibre in every cord in every ply is soaked in liquid rubber, preventing internal friction and heat, which provides greater strength and blowout protection.

TWO EXTRA LAYERS OF GUM-DIPPED CORDS UNDER THE TREAD - This patented Firestone feature cushions road shocks, protects against punctures and gives longer life.

LONGER NON-SKID MILEAGE - The non-skid tread is wider, flatter, with more and tougher rubber on the road, giving longer wear and thousands of extra miles.

LOW PRICES — Volume production makes these low prices possible.

THE FIRESTONE NAME AND GUARANTEE - Every Firestone Standard Tire bears the Firestone name, your guarantee of greater safety, dependability and economy.
