No Cotton Marketing Quotas For '43 Crops

Based on recommendations of the Agricultural Adjustment Agency, the War Food Administration has announced termination of cotton marketing quotas for the 1943 crop and indicated that no quotas would be in effect for the 1944 crop.

The action followed announcement of the July 8 cotton crop estimate by the Bureau of Agricultural Economics, which indicated farmers had in cultivation on July 1 only 21,995,000 acres, about eight million acres under the 1943 permitted acreage.

More than half of the underplanting of permitted acreage occurred in Texas, Georgia and Oklahoma.

The 1943 national AAA cotton allotment was about 27,200,000 acres. A later provision permitting ten per cent additional planting increased this year's permitted acreage to about 30 million acres. In only one state, Mississippi, is the cotton acreage in 1943 larger than in 1942.

The cotton acreage estimate for this year not only is eight million below the permitted acreage but is also nearly a million and a half acres under the acreage in cultivation on July 1, 1942.

Officials said the cotton loan program will remain in effect without change for the 1943-44 marketing season. Also, termination of marketing quotas will not affect the basis on which payments will be made to farmers under the 1943 Agricultural Conservation Program.

The WFA said prospects are that the carry-over of American cotton in the United States on August 1 of this year will be about the same as the 10,500,000 bales carried over on August 1 last year.
