

## Agent Reports On Recent Farm Tour To Maryland

Perquimans County's Farm Agent, I. C. Yagel, joined a group of farmers and agents from Pasquotank and Tyrrell Counties on a farm tour through Virginia and Maryland last week. On his return here Mr. Yagel made the following report on the tour:

"On Monday the group observed a large commercial cannery at Exmore, Va., at which time string beans, corn and lima beans were being canned.

"The entire day Tuesday was given to a tour of the Lancaster stock yards and farms in the Northern part of Lancaster County. The Lancaster stock yard covers an area of 30 acres and is the largest east of Chicago. Many cattle from the Carolinians and Virginia are handled there, both feeders and fat cattle. One interesting

fact observed was that many farmers in that area feed beef cattle (dry lot) in the summer to conserve their straw and produce manure for their farms. Many of these farms are too small to afford pasture area. The chief crops raised are small grain alfalfa, clover and timothy hay, corn, tobacco and some Irish potatoes and tomatoes. Tobacco is not extensively grown, just an acre or two per farm. It is harvested in late September and air dried. The entire plant is cut and hung in the barn to cure. It is stripped and marketed during the winter. Thirty five cents per pound is considered a good price. Beef cattle or dairy cattle are found on most farms. Poultry production is also quite common in that area.

"Wednesday the group visited the Beltsville Experiment Station. The objects of study there were the breeding and management of swine and dairy cattle. The Danish Landrace is being used quite extensively in crossing with other breeds in an attempt to produce an ideal market animal.

In the dairy work the Red Sindhi Bull from India is being crossed with Jersey cattle and a study of milk and butter fat production is in progress. A new type of silo was observed here. This silo is glass coated inside and out, is sealed air tight, at the top and is unloaded from the bottom by a specially built unloader. Also curing hay with a dryer was observed.

"The beef cattle work of the Beltsville Station was observed Thursday to their 4,300 acre farm at Front Royal, Va. Work is being started there with Hereford Angus, and Shorthorn breeds. This phase of the work is just getting started. They are in the process of growing breeding stock for their experimental work.

"This proved to be a very educational tour and many of those taking part feel that a tour of this type should be an annual affair."

### CLUB MEETS

The regular monthly dinner meeting of the Hertford Lionsess Club was held Friday night, August 10, at the Hotel Hertford with twelve members and one guest present.

The meeting was called to order by the president, Lioness Minnie W. Hurdle, after which the "Lioness Code" was sung.

Lioness Anna Lee McGoogan gave the invocation.

Several musical selections were sung by the guest, Mrs. Georgia Perry.

The minutes of the last meeting were read by the secretary, Lioness Ruby White.

The club business was discussed, after which the meeting was adjourned with the Lioness Toast.

## Boll Worm Damage Found In County

Boll worm damage is now showing up in some cotton fields of the county, it was reported this week by the County Farm Agent. Weevil damage has increased sharply in the last two weeks, too. However, damage now from weevils will not be too serious because the major portion of the cotton crop is already in the boll except in late cotton. The cotton growers main concern now is protecting the crop from damages of the boll worm. According to the State Cotton Committee report, heavy boll worm infestation should be treated with 10% DDT at the rate of 15 to 20 pounds per acre.

Defoliation is recommended on heavy foliage cotton where there is danger of boll rot or where it is desirable to hasten maturity for early picking. Cotton can be forced to shed the leaves early by dusting with 20 to 40 pounds of cyanamid in the dust form.

This material should be applied when the last bolls expected to mature are at least 30 days old. The dust can be applied by airplane or by any other equipment suitable for dusting.

### REVIVAL IN PROGRESS

A revival at Great Hope Baptist Church, in Perquimans County just off the Hertford-Tyner highway, is now in progress, and will close Friday night.

The Rev. R. N. Carroll, pastor of the Edenton Baptist Church, is preaching, and the Rev. Paul E. Lemons is conducting the singing. The public is invited. Services begin at 8 o'clock.

USE ONLY GENUINE  
JOHN DEERE  
PARTS

They'll Save You  
Money in the Long Run

If any of your John Deere Implements need parts replaced, it will save you time and money in the long run to replace them with only genuine John Deere Parts.

There are important reasons why genuine John Deere Parts are best for your equipment. When a John Deere farm implement is planned, skilled engineers design the best parts possible. In the manufacturing process, each part is made as these engineers planned; made right to fit and work properly . . . last longer.

The parts we sell as replacements are often made at the same time as the original parts; they're always made of the same high-grade material and with the same quality workmanship.

Considering this, ask yourself—can you afford to take a chance with parts that may fit . . . may work properly? Don't risk it; check over your John Deere Equipment now and place your parts order with us. Be sure of genuine John Deere Parts for John Deere dependability.
