

Price Support Program On Corn

Price support for corn of the 1956 crop will be based on the rate in the county where the corn is produced and not, as heretofore, on the rate in the county where the corn is stored. In other respects, the price-support program for 1956 is essentially the same as last year, according to L. L. Lane, Chairman of the Perquimans County Agricultural Stabilization and Conservation Committee.

With corn harvesting under way, Chairman Lane also reminds farmers of the moisture requirements if corn is to be eligible for price support. For ear corn placed under a farm storage loan, the moisture content must not exceed 20.5 per cent if the corn is tested for loan through February, 1956; 19 per cent if tested for loan during April of 1956; and 15.5 per cent if tested for loan during May, 1956. For corn placed under a warehouse storage loan, and for shelled corn placed under a farm-storage loan, the moisture content must not exceed 13.5 per cent irrespective of when the corn is tested for loan.

Grade requirements for corn to qualify for a loan remain the same as 1954. Corn placed under loan must, except for moisture content, grade No. 3 or better or No. 4 on the factor of test weight only.

Winfall News

Mrs. Cameron Surface visited her mother and brother, Johnnie Baker and family the past week-end.

The Driver's Clinic

A question and answer column on traffic safety, driving and automobiles, conducted for this newspaper by the State Department of Motor Vehicles.

Question: What gear do you use going down a steep hill?
Answer: Usually the same gear necessary to climb the hill. Or a gear which will keep the car under control without constant applica-

tion of the brakes.

Question: How do you change to a lower gear going down a steep hill?

Answer: In this order, depress clutch, shift to neutral, release clutch, rev up engine, depress clutch, shift easy to lower gear, release clutch.

Question: Why does one low tire cause a car to skid?

Answer: It gives a slight increase in traction on one wheel which may throw the forces acting on the car out of balance, especially on a slick surface.

Question: Why is it only one rear wheel turns when a car is stuck?

Answer: The differential which permits the car to turn corners also permits the rear wheel that meets the least resistance to turn faster than the other wheel. When a car is stuck, a slight difference in the holding force of the mud, or sand, will permit one wheel to spin.

- 2-OZ. J&J Cotton 33c
- Sal Hepatica 35c
- Kolynos Tooth Paste TWO 4c TUBES Only 69c

S and M
"ON THE CORNER"

and the car will not move.

Question: How do you increase traction when only one rear wheel turns?

Answer: Place under the spinning wheel any material that will help increase traction. Examples: Dry branches, weeds, dirt, stones.

Question: What's a quick way to tell whether your headlights are out of focus?

Answer: One way to know your headlights are in proper focus, drive your car into your garage with the headlights on high beam. Make a cross with a piece of chalk on the back wall of the garage at the center, or hot spot, of each beam. You can then quickly check your headlights anytime to see whether they are out of focus. Do not take for granted new car head-

lights are in focus. Have them checked. A beam one degree off at the lamp will be off five feet at 300 feet.

Kind Men
Little Girl—Look at that kind man across the street.
Mother—What is he doing, dear?
Little Girl—He's sitting on the sidewalk talking to a banana peel.
