

Boat Owners Asked To Register Vessel

In furtherance of the Coast Guard Maritime Safety Program, owners of unlicensed boats have been requested to send a postcard, with number, name, type of vessel, owner and address and Port of Birth to the Commanding Officer, U. S. Coast Guard Air Station, Elizabeth City, N. C.

The information is being sought in order that the Commanding Officer of the Coast Guard Station may arrange for boarding and inspecting the vessels.

MOSQUITO PROBLEM APPROACHING

By K. J. EYER, District Health Department Sanitarian

The most important mosquito control measures are those which are directed against the mosquito egg, larvae and pupae. The individual can do much around his home to prevent the breeding of these pests which create a nuisance, disturbing one's comfort and sleep. It is, therefore, of great importance to understand where these mosquitoes breed and what the individual can do to help keep the mosquito population at a minimum.

Mosquitoes breed only in water. Water is essential for the life cycle of the mosquito. People are wrong who say they breed in grass, weeds and shrubbery. The adult mosquito seen in these places are only resting and choose these places during the day because of the protection afforded them from the sun and their enemies. Eggs are laid on the surface of water and in about 48 hours very small larvae or wigglers are hatched. The larvae live on bits of organic material or plant life in the water, coming to the surface from time to time to obtain air through breathing tubes. In about 8 to 14 days the pupal stage develops which lasts 48 hours. The pupal case then breaks open and the adult mosquito emerges.

The flight range of mosquitoes varies with the species. Some may be classed as domestic species because they are commonly or almost exclusively found in or close to human habitations. Some species fly from a few hundred yards to one and one half miles; while the salt marsh mosquito, may migrate inland forty miles or more aided by onshore winds.

Measures aimed at the destruction of the mosquito fall into two classes—(1) those directed against the egg, larva and pupa—the aquatic stage and (2) those directed against the winged insect. The most effective measures are those which destroy breeding places, thus preventing their multiplication. For the best results both individual and community efforts are necessary, but the importance of individual effort alone cannot be too much emphasized. The individual, by attacking the problem on his own premises, can do much not only to rid his own immediate neighborhood of mosquitoes and thereby increase his own comfort and guard against disease, but the example thus set will perhaps stimulate his less enterprising neighbors.

man-made breeding places. No body of water is too small for a mosquito nursery. They breed in puddles by the roadsides; in water that accumulates in furrows in gardens or fields, especially in clay; in sagging house gutters which hold water after rains; in discarded tin cans; bottles; fire-buckets; in water cups on the frames of grindstones; in old tires; bird baths; rain barrels; unused flush toilets; or any other container which holds water.

Mosquitoes already have made their appearance in the Albemarle section and occupants of each residence should make special efforts to eliminate these existing breeding places. In some places where it is almost impossible to eliminate standing water, an application of light grade fuel oil will prove very valuable in destroying the larvae and pupae of the mosquitoes. The oil must be renewed every week or two, depending upon the temperature and other conditions.

Poor Little Worm

It was her first silk dress and little Alice was simply overwhelmed. Her mother marked the occasion with an impromptu lecture on textiles.

"You know dear," she began, "this beautiful dress was given up by a poor little worm."

"I know, mother," Alice replied. "Daddy's awfully generous, isn't he?"

NOTICE TO TAXPAYERS

OF PERQUIMANS COUNTY

The Board of County Commissioners has authorized me to advertise, during the month of June, all property in Perquimans County on which 1955 taxes have not been paid.

Advertising of these delinquent taxes will be done during June and same will be sold July 2. At the same time I will begin levying on Personal Property on which 1955 taxes remain unpaid.

If you have not paid your 1955 taxes please come in and make prompt settlement and save additional costs.

J. K. WHITE

Sheriff of Perquimans County
