Your need is His opportunity, and His nearness is your opportunity. Will you seize this opportunity by an utter surrender of your life to Him, by giving Him complete freedom to do all He desires to do. To do that is to be on the right road that leads to heaven hereafter. The Churches of this Community will gladly help you to know Him.

 Prayer Service Wednesday 7:00.

AND HIS MA

She bets that I'll be a fullback at West Point when I grow up an' I bet I will too, 'cause I keep in condition by drinkin' a full quart of PASTEURIZED MILK every day, and believe me it's a swell buldupper!

High Spots on Record-Breaking Run

Signs of the times in a motor age—these highway markers tell the story of a two-year, 100,000-mile truck test run recently completed by Chevrolet. In Canada, Mexico and every state of the Union, the truck operated on all types of highways and under every conceivable weather hazard, setting a new world mark for sustained and certified automotive operation, under the sanction and official observation of the American Automobile Association. The unit carried a 4,590-pound "payload." An average of 15.1 miles per gallon of fuel was maintained throughout the 100,000 miles, at an average operating speed of 33.07 miles per hour. Oil mileage was correspondingly high—1,072 miles per quart.

Payments To Be Made For Mulching Trees

North Carolina farmers will be allowed a practice payment of \$1.50 under the 1940 agricultural conservation program for mulching their bearing orchards, according to H. R. Niswonger, extension horticulturist at State College.

Two tons of air-dried straw or an equivalent in mulching material, including barnyard and stable manure will be required per acre. The material must be hauled into the orchard and may consist of straw, hay, leaves, wood shavings, or other organic matter which has a good water-holding capacity.

Payment will not be allowed if any of the mulching material or material produced on the orchard land in 1940 from grasses, legumes, or cover crops is taken from the land.

Niswonger explained that the material should be thick enough to check the growth of grass or other vegetation. Likewise, it should be applied not closer than two feet from the trunk of the tree and as far out as the branches extend.

The quantity of mulch to apply to each tree at the rate of two tons to the acre will depend upon the size of the tree or the spread of its branches. Most North Carolina apple orchards average 50 trees to the acre.

If straw or similar material is used, each tree will require approximately one bale, or 70 to 80 pounds, if the trees are of medium size. Small bearing trees may require less than one bale, and large mature trees may need two to three bales.

Mulching aids bearing fruit trees by maintaining a supply of moisture, preventing erosion, improving the size and color of the fruit, and providing an abundance of humus or organic matter for the soil.

Farm Questions

Q.—When should I sow pasture land?

A.—North Carolina farmers are sowing pasture at the present time since the best spring dates are from February 15 to April 1. Carpet grass, dallis grass, and lespedeza should always be sown in the spring. They may be sown on top of other grasses and covers planted the previous fall. Bermuda grass cuttings may be set out in March, since the seed are
