Wesleyan Methodist
 R. L. Phillips, Pastor.
 Sunday School 9:45.
 Morning Service 11:00.
 W. Y. P. S. or Class meeting 6:15.
 Prayer Service Wednesday 7:00.
 Evening Service 7:00.

Hillside Tests Shows Value of Cover Crops

Winter is approaching and that means the loss of soil on farms where the land is not protected with a cover crop. To prove to farmers the value of a winter cover in soil and water conservation, a number of county farm agents of the State College Extension Service are conducting hillside tests to accurately measure the loss of soil and plant food as a result of erosion.

One such test is being conducted in Franklin County, on the farm of H. P. Fuller of Louisburg, Route 1. A recent Farm Tour, held cooperatively by the Extension Service, Soil Conservation Service, Farm Security Administration and other agencies, showed the following results, according to Farm Agent W. C. Boyce:

In two plots where cotton and corn have been grown continuously since 1937, with no winter cover crop, the silt boxes at the bottom of the hill collected 44 tons of soil per acre per year. In another plot, where lespedeza has been grown continuously, no soil was lost during the same period.

In two other plots, where corn and cotton have been grown, and crimson clover used as a winter crop, the annual loss of soil per acre from the 7 percent slope was 38 tons, but where a four-year rotation of cotton, corn and barley was planted, with lespedeza, crimson clover and barley as winter cover crops, the annual loss of soil per acre was only 7 tons.

Boyce also reported that in 1939 the corn yielded 31 bushels per acre on the plot where corn has been grown continuously, 51 bushels per acre where it was grown in a two-year rotation, and 53 bushels per acre where it was grown in a four-year rotation. In 1940, barley grown in the four-year rotation yielded 55 bushels per acre.

Yancey county farmers are showing a considerable amount of interest in the use of lime and phosphate obtained thru the AAA grant and plan.

THIS WAS ADVERTISING ONCE

BUT NOW THE NEWSPAPER DOES IT BETTER

Plans are being made in Craven County to promote the use of barley as a feed crop in connection with the feeding of corn, says P. M. Cox, assistant farm agent of the State College Extension Service.

C. H. Roberts of the Hoopers Creek township has one of the best examples in Henderson county of what lime and phosphate will do to revitalize old pastures, says Assistant Farm Agent D. W. Bennett.

The planting of winter grazing crops is helping those mountain farmers who had their hay supplies washed away in the recent flood, report farm agents of the State College Extension Service.

Stock Should Be Kept Away From Crotalaria

Crotalaria is one of the newer soil building crops in North Carolina. It is a legume especially well adapted to the sandhills sections.

But crotalaria is poisonous to cows and other livestock, warns Dr. C. D. Grinnells, veterinarian of N. C. State College. Crotalaria spectabilis is an excellent legume, but its leaves, stems, and seeds are toxic to all livestock and a small quantity of these can kill an animal, Dr. Grinnells declared. Use this plant for cover or for building the soil, but don't let your stock get to it, he advises.

stock except when in the blossom stage, and ordinarily is not eaten unless other grazing is scarce, the State College authority continued. It is very much in blossom in several sections of the State at the present time.

"All cases of crotalaria poisoning do not develop in the same length of time, Dr. Grinnells declared. According to scientists of the Florida Agricultural Experiment Station, where extension work on the pois-

onous effects of the plant has been done, grass may develop from the second to the sixth month after the animal has eaten the plant.

The veterinarian says that the outstanding symptoms of crotalaria poisoning are: Loss of appetite, weakness and an unsteady gait, a depressed attitude on the part of the animal, diarrhea, and bloody nasal discharge.

"We are not trying to discourage the growing of crotalaria in certain sections of the State, but lespedeza usually makes a much better legume and is perfectly safe as a feed for all types of livestock.

FEEL PEPPY! RELIEVE THAT AWFUL BACKACHE

EN-AR-CO

Feel like stepping out again by relieving that backache (due to fatigue and exposure). Just rub on some En-ar-co and instantly it begins its four-fold work of helping soothe that back. Pleasant. At all druggists or send 10c for trial size to National Remedy Co., 55 W. 42 St., N. Y. C. Dept. X.

You'll say it's Too Good to be True...

UNTIL YOU SEE AND DRIVE IT!

HERE'S one time when even the hard, cold facts read like a page out of a story book! That's why we say—judge this car by the evidence you get when you're in there behind the wheel!

Judge it by the traditional Dodge craftsmanship that helps explain why there are more Dodge cars on the road today than any other car in the Dodge field!...Witness the new jewel-

case instrument panel!...The fittings that gleam like fine silverware!...The deep, pillow-type upholstery!

There are new safety and economy advantages besides! For example, a spring-balanced rear deck lid to the luggage compartment, that raises or lowers without effort—and that can't fall accidentally! New Safety Wheel Rims to hold the tire to the rim should a "flat" occur; new Oil Bath Air Cleaner

that prevents grit from attacking the engine's "innards" and greatly prolongs its life!

And now, the car that pioneered the All-Steel Body, Equal-Pressure Hydraulic Brakes and other vital improvements offers you Fluid Drive®—for the first time in a low-priced car!

Why not see and drive it? Drop in on your Dodge dealer now!

1941 DODGE

Luxury Liner

*Fluid Drive optional at slight additional cost

— ENJOY THE TRIPLE THRILL OF DODGE FLUID DRIVE® —

Gearshifting Takes a Holiday! You can start in high, drive in high, stop in high...and start again in high without shifting gears! A Thousand Different Speeds! Drive from one mile an hour to top speed without ever shifting! The Smoothness of Oil Power is transmitted to rear wheels through a cushion of oil, giving unbelievable smoothness and longer car life.
