Children's Books
Buying books for their youngsters often presents a bewildering problem to parents. There are so many and such varied kinds on display in the stores. Sympathetic specialists have come to the rescue and suggest something like this: For a two-year-old get picture books about objects he knows, such as airplanes, engines, cars and other children. Four-year-olds generally like stories about things that are happening around them every day. Fairy tales and tales of achievement are right for seven, eight or nine-year-olds.

U. S. Wheatfields
The billion-bushel crops of wheat in 1944 and 1945 have come from 100,000 square miles of wheatfields—enough to cover every inch of New York and Pennsylvania with most of New Jersey thrown in. Wheatfields cover one-fourth of Kansas, the nation's top producer, source of one-fifth of the crop. North Dakota, Oklahoma, Texas, Montana, Washington, Ohio and Nebraska follow the leader.

World War II Takes Toll of 10 Million

Approximately 10,000,000 men were killed in action during World War II, according to the statisticians of the Metropolitan Life Insurance company. Estimated Axis losses exceeded 5,200,000; those of the United Nations were about 4,500,000. The United States and the British Empire are the only major powers for which official and fairly complete statements of battle losses are available.

Germany tops the list, with 3,250,000 battle deaths. Japan lost about 1,500,000 men, and Italy probably 150,000 to 200,000. Germany's other satellites together lost 225,000. Of this total, Romania's losses account for about 100,000; Hungary's for about 75,000, and Finland's for about 50,000. Cullgaria's losses were small.

Russia's deaths in combat are estimated at approximately 3,000,000, or about two-thirds of the entire combat losses suffered by the Allies. The second highest toll among the Allies was borne by the British Empire, whose battle deaths are estimated at 375,000 to 400,000. Next in rank is the United States, with about 325,000 battle deaths, including an allowance for deaths among those wounded in action, and among those still carried as missing on the casualty lists.

Black Onyx See Settings
Onyx in its typical form is composed of parallel black and white bands, the black bands probably being colored by organic matter. Good onyx is comparatively rare, hence the practice of artificial coloring. Advantage is taken of the banding in the engraving of cameos, the raised sculpture being cut from the white layer leaving the black layer as a background.
