St. Valentine Observances

Laid to Roman Custom
Those lacy cards and red heart-shaped boxes of candy sent on Valentine's Day have nothing to do with St. Valentine, according to the Britannica Encyclopaedia for children. Although there are seven St. Valentines listed in the "Acts of the Saints" and February 14 is the saint's day for them all, no connection has been found between the saints and the holiday as it is celebrated today.

It is thought that the customs of the holiday are, instead, a continuation in modified form of an ancient Roman festival called the "Lupercales," which occurred on February 15 and was something like a carnival.

In the 1700s the customs of Valentine's Day were indicative of serious romance. It was a general belief that the first person of the opposite sex whom one met on that day would be one's Valentine for the whole year and perhaps for life. One young damsel, says Britannica Junior, wrote in 1784, "I lay abed and shut my eyes all the morning and would not have seen another man before him for all the world."

Sometimes the young people held a lottery on St. Valentine's eve when the names of the girls were put into a box and were drawn at random by the young men. Then each pair would exchange gifts and each would be the other's "Valentine" for the year.

Here's Way to Estimate Live Weight of Deer

"How much did that big buck weigh when he was alive?" is a question which puzzles many deer hunters. But there is a way to determine the "live" weight of a dead deer, according to Henry P. Davis of the Remington Arms company.

"Few deer hunters have facilities to weigh their kills immediately after the deer has been bagged," says Davis, "and all are anxious, and properly so, to 'dress out' the animal as soon as possible. However, there is an old rule which will allow one to easily compute the 'live' weight of a deer by weighing the dressed animal. Naturalists, biologists and ornithologists have found, through extensive experience, that a pretty safe rule to follow is to consider the weight of a dressed deer as 76.612 of the 'live' weight of the same animal. That's drawing it down to a fine point, but those figures can be depended upon."

"For example, if a buck dresses two hundred pounds, you can bet that the big fellow weighed a small slice of venison less than two hundred and fifty-five pounds when he roamed the woods. No one can prove you are wrong, anyway."

Hybrid Corn

What is hybrid corn? The various factors that make corn what it is are carried by tiny determiners called genes. These genes are carried on the chromosomes of the plant cells and are so small that you can put a handful of them on the point of a needle. There are two genes for the same factor in each seed. If they are alike, we say that the seed is pure for this factor. If they are unlike, we say it is impure. Should the seed be impure for a certain factor, it will show the character of the dominant one. By inbreeding corn for five generations we get all the factors in it approximately 95 per cent pure. Then, when you plant two of these purified strains next to each other and cut the tassels off one, the seed that you get from it will be a hybrid corn. Since 95 per cent of the genes are pure, the corn will look very much alike as far as its characteristics are concerned.

Cabbage Cousins

Two vegetables, cauliflower and broccoli, are similar in food value and texture. They are cousins to the cabbage. Cauliflower forms a head of white blossom clusters and broccoli forms smaller heads of dark blue-green blossoms. Unlike cauliflower, the stems and leaves of the broccoli are cooked also. A large bunch of broccoli or a medium-sized head of cauliflower, weighing two to two and one-half pounds, should serve five to six people. The secret of making well-liked dishes of both of these vegetables is not in over-cooking them. The water from both vegetables should be brought to the boiling point before the vegetables are added. They are usually cooked in an uncovered vessel. Twenty minutes boiling time should be allowed whole heads of cauliflower, and ten to twelve minutes if the head is divided into florets.

Leading Accidents

Compilation of statistics on accidents released by the Inland Fisheries and Game Department of Maine offer some interesting information. The report indicates that there were 12 non-fatal shootings in which hunters were mistaken for white-tails. Of the total accident cases (18) under "mistaken for deer" 13 were wearing red clothing. Another hunter wearing red clothing was mistaken for a fox and fatally shot. Two hunters, mistaken for partridge, both carried packages of bird shot. They wore conventional black hunting clothes.

There was a man of our town,
And he was wondrous wise;
When it came to buying bread,
Here's what he would advise:
"Buy tasty, healthy HOLSUM,
And eat some every day—
So creamy-soft and oven-fresh,
It's tops in every way!"

It's a wise shopper who puts HOLSUM on her daily list, because it's delicious, healthful bread. So be wise! Buy HOLSUM!
