 Sunday—
 10:00 a. m. Sunday school.
 11:00 a. m. Preaching service.
 6:00 p. m. Training Union.

Powerful New Antibiotic

Aid Against Infections

After nearly four years of research, a powerful germ-killing chemical, called bacitracin, has been developed to give the medical profession a potent new weapon with which to tame a long list of infectious diseases. Bacitracin was used on 100 patients and saved 62 of them from the surgeon's knife. It treated locally with bacitracin a favorable response was obtained in 81 per cent.

Bacitracin will be of clinical importance only if it can succeed where penicillin or the sulfonamide compounds cannot, medical authorities say. Infected fingers, boils, carbuncles, sties and ulcers are some of the conditions in which bacitracin made it unnecessary for the surgeon to lance, or if surgery was needed it helped speed healing. The substance worked with such speed that the results surprised both the patient and physician.

Bacitracin originally was obtained from a germ which was found in the badly infected wound of a seven year old girl, Margaret Tracey, who had suffered a compound fracture of a bone in her leg. The new antibiotic was named "bacitracin" in her honor. In ordinary culture mediums physicians observed the bacillus produced a wide spectrum of antibacterial activity. They also found that the subsequent crude filtrate proved very effective when it was injected into the center of boils and carbuncles.

Physical Skills Qualify

Persons for Certain Jobs

While studying art of the blind, Dr. Viktor Lowenfeld, professor of art education at Pennsylvania State college, noted that most blind persons in their work had a tendency to exaggerate the size of the hands or other strained muscles, a trait that indicated they were hapticals. But he learned also from experimentation on a large scale that not all blind people were hapticals and not all other people were visualists. The aptitude of the visual, he says, is to use his eyes for observation, and he possesses unusual ability to visualize details. He can integrate partial impressions for purposes of orientation.

"While riding in a train," Dr. Lowenfeld explains, "A haptical sees merely pieces of landscape through the moving train window. The visual is able to integrate these pieces in his mind into one landscape."

Dr. Lowenfeld points out that these traits are important in selecting men for certain jobs. The haptical, for example, would be the better man for the same jobs as duties where skillful fingers are needed. The visual would be the better man in jobs which make use of his ability to see and observe, such as a surveyor, architect or an airplane pilot. Tests designed by Lowenfeld were used during World War II by the army air forces to determine whether men were good potential pilots.

U. S. Mineral Production

Shows Gains Since 1870

Total mineral production in the United States has increased tremendously since the first census figures became available in 1880.

From a value of \$367 million in that year, production has increased more or less steadily, with a prewar high of \$6.9 billion in 1920. In the 20s output was valued at an average of about \$3 billion, but in the early 30s dropped to levels lower than since before World War I, equalling \$2.4 billion in 1932. It rose again in the 30s, with a temporary drop in 1938, and during the war years reached new highs of \$7.5 billion in 1942, \$8 billion in 1943, and \$8.5 billion in 1944.

The ten chief mineral producing states from 1940 to 1944 were Pennsylvania, which in that period produced \$25 billion worth of mineral products; Texas, \$14 billion; California, \$12 billion; West Virginia, \$10 billion; Oklahoma, \$8.6 billion; Illinois, \$8 billion; Ohio, \$5.9 billion; Kentucky, \$3.8 billion; Kansas, \$3.7 billion; and Michigan, \$3.7 billion. Pennsylvania contributed 18 per cent of the mineral output of the country in that period, and Texas, 10 per cent.

Let's PERK UP the kitchen!

With Youngstown Kitchen equipment, you can quickly and easily transform your old kitchen into a beautiful, modern room that is a pleasure to work in.

The first step toward modernization should be the Youngstown "Kitchenaid" cabinet sink. Available in different models, all with gleaming white, acid-resisting porcelain enameled tops. Among the many features are twin-bowls with dish and vegetable spray, removable drain-board to provide extra space for food preparations, large drawers with special compartments, and plenty of lower storage space.

Other Youngstown units include spacious wall and floor cabinets, with generous shelves for crockery, glassware, books or dining equipment. Let us show you these attractive, modern, modernizing units, and give you an accurate estimate of the cost of installation. We'll be glad to help you.
