

**World Scholars and Unesco Officials Plan a History of Mankind**

A six-volume history of mankind, from prehistoric times to 1957, the year of publication, is to be written by a team of 1000 leading world scholars. The sponsor of the program is the United Nations Educational, Scientific and Cultural Organization (Unesco), which is advancing \$400,000 for the work, which is estimated to cost \$600,000. The project will take five years to complete and will assemble knowledge of all races, cultures and peoples, past and present. Here are Unesco officials and members of the International Commission for a Scientific and Cultural History of Man-

kind, which is in charge of the work: Left to right, seated: Dr. Constantine K. Zurayk, Syria; Dr. Julian S. Huxley, the United Kingdom; Dr. Paulo B. Carneiro, Brazil, President of the Commission; Dr. Jaime Torres Bodet, Mexico, Director-General of Unesco; Dr. Ralph E. Turner, the United States, chairman of the editorial committee, and Dr. Carl J. Burckhardt, Switzerland. Standing: Dr. Pedro Bosch-Gimpera, Mexico; Dr. Jean Thomas, France; Dr. Silvio Zavala, Mexico; Dr. Charles Moraze, France; Dr. Armando Cortesao, Portugal, Commission secretary-general, and Dr. Mario Praz, Italy.

**Banker Urges Voters Register, And Vote**

"Approximately \$2 million people in the United States can qualify to vote in the fall elections," L. E. Abbott, cashier of the First National Bank stated here today. "But to be eligible to vote, one must register."

"Our American Way of Life is facing a crucial period," Mr. Abbott continued, "and as good citizens, we must except our responsibilities and the right to take active part in local and national affairs." He pointed out that we must register and then vote for the candidate and issues that will ensure the continuance of this

government "of the people, by the people, for the people."

Mr. Abbott went on to say that our duty does not end with voting. Our elected representatives should hear from us on every important issue. One such issue is the nation's economy. Higher costs of living and higher taxes are the affair of every tax payer. The citizen's disinterest and inertia in expressing his point of view to his elected representatives makes the Congressmen's job more difficult. Let them know how you feel on all major issues!

In conclusion Mr. Abbott urged that every eligible voter should 1. acquaint himself with the issues of the day; 2. register so that his vote will not be lost; 3. vote

at the designated election period; and 4. express his point of view frequently to his Senator and Representatives.

Be sure you understand and vote for the measures that will ensure the American Way of Life!

The First National Bank is a member of the National Thrift Committee which recommends an active participation in government issues to strengthen thrift practices and habits.

Consumption of fertilizer in the West, North Central States of Minnesota, Iowa, North and South Dakota, Nebraska and Kansas has increased 965 per cent since 1939.

Prior to World War I, American agriculture was entirely dependent on foreign sources for potash, but today private enterprise has bought the nation virtual "potash independence".

Twenty-seven Onslow County 4-H Club boys have received 1,000 bicolor lespedeza seedlings each to plant as feed for wildlife. The seedlings will be planted in strips around game cover areas on the farm.

Fertilizer consumption in the United States has increased from a pre-war average of about 7.5 million tons to over 20 million tons in 1951.

**United Nations Children's Center Trains Europeans To Combat Polio**

GARCHES, France — "She's a beautiful child," said a nurse at the Raymond Poincaré Hospital here, pointing to a five-year-old blond girl.

"Everyone here, you know," the nurse continued, "has had poliomyelitis (infantile paralysis) and this room is used for the gymnastics which help to re-educate the patients' bodies."

The blond girl, laughing and pleased with the attention she was getting, was lifted to a padded table and placed on her back. A nurse slowly raised the child's legs, and began exercises which described a geometrical pattern with movements made to a slow rhythm. Only then could the mark of the disease which had struck the girl a few months before be seen; the muscles of her left leg were still withered enough so that even an unpracticed eye could notice it.

The child, Jeanne, whose family lives in Paris, had an international audience that day. Watching her and the work of her nurses were a group of trainees brought here by the International Children's Center, which was established with the help of the United Nations International Children's Emergency Fund (UNICEF).

Jeanne and the other children who live in the hospital, located in a pleasant Parisian suburb, will see the trainees almost every day for some five months. During that time, the trainees, who include nurses, social workers and physical therapists, will come to the hospital — the only one in France and one of the few in Europe specially devoted to the treatment of polio — every day for practical work in the clinics, gymnastic rooms and therapeutic baths during the mornings and for lectures during the afternoon.

When the latest training period, the second of its kind offered by the International Children's Center and the hospital here, began in January, 14 young women from 10 nations were enrolled and four more were expected. After the course ends, the women will return to their homes to take up their jobs with new knowledge of their own work.

A blue-eyed orthopedic nurse from Belfast in Northern Ireland, Miss Rosemarie McClay, explained that she, like the other trainees "hopes" to bring back something of the special methods of the Raymond Poincaré Hospital.

"In the north of Ireland, we haven't yet got an orthopedic hospital and when we have one I'd like to work in it. This is the first time I've been able to receive training in this special field of re-educating children who have had polio," she declared.

**Four VA Units To Get Isotope**

Radio-isotope units for medical research will be installed in four new Veterans Administration hospitals which are nearing completion, VA announced.

They are the hospitals under construction at Durham, N. C.; Atlanta, Ga.; New Orleans, La.; and Iowa City, Iowa.

Facilities will be provided in each of these hospitals for qualified personnel to utilize radio-isotopes in biological and medical research; in clinical diagnostic studies and in clinical therapy when appropriate.

The activities of each unit will be conducted in close cooperation with, and under the advisory guidance of, a committee from the staff of the local medical school. In the case of the Durham Hospital, this will be the Duke University Medical School.

The addition of the four new units will bring to twenty the number of radio-isotope units in the Veterans Administration medical program, according to the announcement by Admiral Joel T. Boone, VA Chief Medical Director.

About 40 per cent of the nation's rock phosphate supply is in Florida and Tennessee and 60 per cent in the Rocky Mountain States.

USDA says that "on already productive land, fertilizer can play a stellar role in helping to increase the yield."

**BOY SCOUT NEWS**

The meeting of Scout troop 8 opened Monday night, March 17, with all the boys repeating the Scout Oath. Nineteen out of twenty-five members attended. The dues were collected and all the boys were given pamphlets.

A trip was planned for Friday night at 6:45, also discussed, was a trip to the beach.

The Scouts played games and talked about the merits they are going to try for at the next Court of Honor.

Fourteen out of 25 members of troop 8 went up for advancement in Court of Honor Thursday, Mar. 13. The banner, which is given to the troop that has the most members present and also has the most points, was given to Scout troop 2.

King, Scribe

North Carolina's population is divided almost equally among urban, rural non-farm, and rural people. This indicates good economic balance.

Fertilizer now contains about 50 per cent more plant food than it did 25 years ago and sells for considerably less.

The use of chemical plant food in the United States probably dates back in 1830 when Chilean nitrate of soda was first imported.
