

Herald "House-of-the Week"

THE ASHLAND is a basementless house consisting of living room, kitchen, utility room, bath and three bedrooms. A door from the front entrance hall into the front bedroom makes it available for other uses such as workroom, den, office, or the door can be omitted if preferred.

An insulated floor slab is laid over a cinder or gravel fill and may be covered with linoleum, asphalt tile or carpeting. The utility room houses the heating and laundry equipment and also has a closet and storage cabinet.

Wardrobe closets, with double doors and overhead storage are provided for the bedrooms, and linen and coat closet in the hall.

Exterior finish includes asphalt shingles, plywood gable ends, face brick chimney and wide siding.

Overall area is 44 feet by 28 feet. Area is 1,224 square feet, while the cubage totals 13,290 cubic feet.

For further information about **THE ASHLAND**, write the Small House Planning Bureau, St. Cloud, Minn.

Grassland Tour To Visit State

Delegates to the Sixth International Grassland Congress at Pennsylvania State College will have an opportunity to visit North Carolina and five other Southern states on one of four organized group tours.

According to S. H. Dobson, pasture specialist for the State College Extension Service, the tours will be held in four different areas to demonstrate accomplishments in grass farming of the United States and Canada, both on actual farms and in research and educational institutions. The tours are mainly for the benefit of foreign participants in the Congress.

The Southern tour will visit Virginia, Tennessee, Alabama, Georgia, South Carolina, and North Carolina. After leaving Clemson College, the group will visit the Biltmore farms at Asheville on September 3, to observe grazing, hay and silage production programs. The tour will also include a stop at the Southeastern Artificial Breeding Stud.

En route to Statesville on September 4, the tour will stop at a milk plant, an alfalfa dehydration plant, a feed mill, a seed processing plant and a fertilizer mixing plant.

On September 5 the group will stop at North Carolina State College, Raleigh, to visit beef cattle grazing experiments. Small plot experiments at State College, including fertility, adaptation and management studies on forage species, and breeding work on alfalfa, lespedeza and trefoil, will be viewed. The tour will end at noon September 6 at Raleigh.

Negro News

By Mrs. Annie Gordon
105 Carpenter Street
Kings Mountain, N. C.

(Omitted on July 10)

Mrs. Alma Mitchem spent the weekend in Shelby visiting her sister.

Tom Hickman of New Jersey is visiting his wife and children. Mrs. Hickman is a patient at the Kings Mountain hospital.

John Fulton of New Jersey is visiting relatives in Kings Mountain.

Mr. and Mrs. Tom Sherrill of Baltimore, Maryland were spend the night guests of Mr. and Mrs. Willis Williams of the Lincoln Academy section Monday night.

Mrs. Rossie Thompson and children of Gastonia are visiting their aunt, Mrs. Annie Gordon, and other relatives.

Mrs. Daisy L. Smith returned last Wednesday after a three weeks visit with her daughter and other relatives in Philadelphia.

There will be a song feast chorus and quartet from various churches and nearby towns at St. Paul's Methodist church Sunday afternoon, July 33 at 3:00 p. m. Everyone is cordially invited. The program will be sponsored by the Building Fund Clubs.

Miss Dorothy Milles and Walter Lewis Hayward were married last Sunday in Gaffney, S. C. The bride is the daughter of Mr. and Mrs. D. J. Milles of the Ebenezer community. The bridegroom is the son of Mr. and Mrs. Junus Hayward. He is now serving in the U. S. Armed forces.

Mr. and Mrs. Plato Pressley and children spent last week in Denmark, S. C. visiting the sister of the latter, Mr. and Mrs. G. N. Gaffney. They visited other points of interest while away. They were accompanied home by Mr. and Mrs. Gaffney and daughter, Sybil.

According to M. L. Campbell, Agricultural Teacher, a meeting of all members of the Compact Farm Club and their wives is to be held at Compact school next Monday night at 8:30 o'clock p. m. The program of work for the club during the coming year is to be considered and adjusted at this meeting.

A meeting of the officers of the Compact Credit Union is to be held at 7:30 p. m. of the same night. Any member wishing to transact business with the official, such as making payments on loans or arranging for loans, are urged to see said officers at the time stated above.

We wish to thank the members and friends of Bynum Chapel A. M. E. Zion church for the donations given us in our rally which closed June 29, 1952.

the purpose of building a new church.

Holiday Accident Hospitalizes 7

Seven persons are in the hospital as a result of an auto accident which occurred Friday morning, July 4, at 9:30 a. m. near the underpass on Highway 29, just south of Kings Mountain. A car occupied by the Head family of Gastonia, on a holiday trip, collided with a car operated

by Charlie Coleman, Negro, and Rufus Chambers, Negro, both of whom were only slightly injured.

The injured persons in the Head car were: Mrs. Ruby Head and her baby daughter, Joanne Head, the most seriously injured in the group, James H. Head, 80, Joy Head, 6, and Joseph Head, 39, all of whom are patients in Kings Mountain hospital.

The State Highway Patrol investigated the accident.

RURAL TELEPHONE SERVICE GROWTH IS AMAZING!

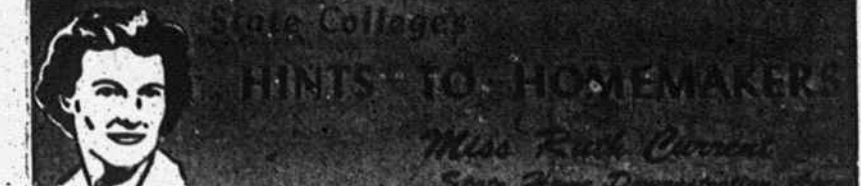

One measure of North Carolina's growth is found in the increase in telephone usage by farm families. Early this year, the state had 106,000 rural phone subscribers... which is significant considering that Southern Bell Telephone Company, which serves more than half these customers, has recorded in twelve years a nearly 500 per cent growth in its rural subscribers.

Also contributing to the pleasant living that is North Carolina is the brewing industry's self-regulation program where brewers, wholesalers and retailers—in counties where malt beverage sales are permitted under state control—cooperate to maintain wholesome conditions for the legal sale of beer and ale.

Wash Clothes Safest Way

There are many everyday household tasks that may hide a danger that is very real and impending — even though it can't be seen!

This is a good point to keep in mind, particularly since National Farm Safety Week comes up July 20-26, pointed out specialists of the State College Extension Service.

Take washing your clothes, for example. You don't ordinarily associate tragedy with this very common practice. Or, of course, if you work with the older wringer type machine, there's always the danger of catching your clothing, your hair, or little Johnny's fingers. But there is another hazard associated with washing clothes that strikes with more tragic results.

According to U. S. Department of Agriculture specialists, there is the possibility of being shocked if your electric appliances used with water or in damp places aren't properly grounded. Without this very necessary protection, a stray current, seeking the easiest way to the ground, may run through your body.

Some manufacturers equip their machines with a cord that grounds the machine where ever it is plugged in. These special cords have a three-pronged plug that requires a three-hole outlet to fit it. Some other washers have a three-wire cord and a two-prong plug that fits into the conventional socket. The third wire in this cord is used for grounding purposes. It branches off the cord near the plug and goes into a tiny socket that replaces one of the screws holding the cover plate in place. This method is very effective if the home is wired with metallic cable. If not, the current will be grounded provided the wiring in the home is well grounded.

Creep Feed Calves Farmers Are Urged

With pastures short throughout North Carolina as a result of the recent drought, it's going to pay farmers to creep feed beef calves.

State College Livestock Specialist A. V. Allen and Sam Buchanan say the pasture shortage has prevented cows from producing their normal supply of milk. Creep feeding, they assert, will add 50 to 100 pounds, and calves will grade higher when they're sold.

You won't need an elaborate creep — just a makeshift arrangement that will allow the calves to get all the grain they want. The ideal place for putting the creep is in the shade near the watering trough and salt shed.

You can build it with either lumber, poles or wire, and it's best to keep the opening 16 to 20 inches wide, and three feet high. A regular feed trough with a roof overhead or a self-feeder will do the job.

The recommended grain ration for calves two to five months old is equal parts of cracked corn and whole oats. For calves five to 10 months old, add one part of protein to eight parts of the cracked corn and whole oats mixture.

For complete details, ask your county agent for a copy of Extension Circular No. 268, "Raising Beef Cattle."

An average loan rate of 50.6 cents per pound for 1952-crop flue-cured tobacco and a schedule of rates by grades have been announced by the U. S. Department of Agriculture.

Net income of farm operators in 1951 was about two billion dollars less than in 1947. However, the total was still nine times as much as the dollar income of farm operators in 1932.

SAFETY HINTS

Boating and Canoeing: Step into the middle of a boat, find a seat and keep it! If you can't swim, wear a life-preserver or stay ashore.

Get your Suntan Gradually: Five to fifteen minutes on the first day is long enough. A protective ointment helps prevent burn. Wear a hat if you're in the sun for a long period. Recommended for summer sun tan: Make your own remedy for an even tan—½ cup olive oil, ½ cup vinegar. Stir in one tablespoon iodine. Blend into your skin evenly before exposing yourself to the sun.

Poisonous Plants and Insects: Learn to recognize poison ivy, poison oak, and poison sumac. The leaves are oval-shaped and grow in groups of three. Mature plants have white, waxy berries. If you run into these plants wash with strong soapy and hot water as soon as possible.

Relieve insect stings with a baking soda paste or calamine lotion. A drop of turpentine, kerosene or gasoline usually kills wood tick. If bites are severe, consult a doctor.

TRAVEL TIPS

Don't forget your First Aid Kit when you go traveling.

Buy your luggage wisely. If you are buying luggage look ahead — there's no need to buy everything at once — luggage comes in "open stock" too. Buy with the idea of matching or coordinating your pieces.

Look on the outside of luggage for good workmanship. The covering material should be sturdy over a substantial frame. The stitching should be firm, double stitching is best. The hardware should be well-shaped and easy to open and close. Look for metal studs to protect the bottom of the case. Bumper edges are good protection too and are found on many lines of luggage.

Look inside the luggage. The lining should be well sewed, well fastened. If there are hangers, they should come in and out easily and fasten securely.

Every time the aldrin hits...

POP GOES THE WEEVIL!

And that's a fact! When weevils eat, touch, or breathe aldrin, they die a fast death. Just a few ounces of aldrin, in a dust or spray mixture, controls an acre of weevils. What's more, aldrin can be easily applied in any standard equipment.

HOW TO KILL BOLLWORMS

An excellent control of bollworm is a ready-mixed formulation of aldrin-DDT or dieldrin-DDT. Both mixtures not only kill bollworm, but also boll weevils, flea-hoppers, tarnished and rapid plant bugs, and grasshoppers. When low cost is a primary consideration, use aldrin-DDT mixtures.

Your insecticide dealer has dieldrin-DDT or aldrin-DDT formulations. Order from him today. For further information, write to nearest address below.
