TEENS HEALTH

Health and Safety Tips from The American Medical Association
The ups and downs of your blood pressure help to forecast the state of your health, somewhat like the readings of a barometer help to forecast the weather.

If the arterial blood pressure becomes too low to circulate the blood properly, certain vital organs particularly the brain, fail to function. Dizziness on standing, fainting or cold skin may be due to blood pressure that is too low for your body's needs.

High blood pressure, properly called arterial hypertension, is an abnormal state of the circulation that may be a cause as well as a result of arterial disease. Hypertension appears to be a complex of influences from our inheritance, emotional life, diet, stress, exercise and the body's response to the vicissitudes of life. A disease of this nature hardly can be expected to respond to a pill or a potion or be cured by a single course of some panacea.

Hypertension requires a lifetime of management. The patient and his doctor, working together, plan a living pattern, supplemented by various medical procedures, that will result in the longest and most useful life the patient can live.

In dealing with hypertension, first there must be a medical history and a complete physical examination. Therapy often includes various medications which your doctor prescribes. Diet and weight control may be an important part of the treatment. And a planned way of life often is essential, involving hours of exercise, periods of rest and frequent vacations away from the problems of home and the stress of business.

Blood pressure tends to increase with age. High blood pressure will ultimately produce disabling or fatal complications. To help prevent complications, long-time management must be planned. It is highly important in combating hypertension that there be close rapport between the patient and his physician. It is essential that the patient understand his disease, know the need for continued treatment and be willing to tolerate the occasional unpleasant side effects of some of the drugs used. The patient must look to the long-term good to be obtained.

Savings Bond Quiz

Q—While cleaning out some old boxes and papers for a recent move, I found several Series E bonds I had bought back in the early 40's then stuck away and forgotten about. What is the status of these bonds?

A—Your bonds are still as good as gold and still drawing interest. In fact, any E bond ever sold is drawing interest. Bonds sold between May, 1941, and May, 1949, had a 10-year maturity period and have been granted two 10-year extensions, which means that none will reach final maturity before May, 1971.
