Preserve Flowers For Fall Arrangements

University Park, Pa. How about preserving some of your garden flowers for arrangements when the wind howls and the snow flies? It's time to begin if you want the pleasure of working with flowers and other plant materials. Pick flowers you plan to dry just before they reach their peak of their bloom. And keep in mind that all plant materials shrink during drying so you should gather twice as much as you think you'll need.

Besides drying flowers from the garden, you can dry seed pods, berries, vegetables, and gourds. You can't preserve all flowers and materials the same way. You can use borax, sand, or silica gel for roses, but you hang cockscomb to dry.

Details for preserving flowers and other plant materials are given in the Flower Arrangement correspondence course from The Pennsylvania State University. Illustrations show how to develop well-proportioned arrangements with emphasis on color harmonies and shapes of containers. The same principles of arrangement for fresh flowers apply to dried flowers.

To get the Flower Arrangement course, send \$1.75 to Correspondence Courses, Box 5000, University Park, Pa. 16802. Make your check or money order payable to The Pennsylvania State University. The complete course will be sent by return mail, and all mailing costs are prepaid.
