A new dimension  
in service...  
on the Southern  
today!

MICROWAVE COMMUNICATION is the new dimension in fast, dependable railroad service. And Southern Railway, in its spirited determination to be ever-increasing usefulness to customers, has in use along its lines today the nation's largest privately-owned industrial microwave system.

What's more, plans have already been announced to more than double the present system of 1,900 route miles by an additional 2,200 route miles.

Total cost of this modern, reliable, all-weather communications medium will be about \$28 million. Southern looks on this as an investment in an even safer, even more efficient and reliable railway. Microwave speeds up our system of keeping tabs on the availability of equipment and on the movement of freight. It helps us keep freight moving on the demanding schedules our customers require. Overall, it means better, lower-cost, more useful service on Southern Railway.

Adapting new and better methods to railroad operations, or creating them ourselves, is putting "Southern's accent" where it belongs — on the things that help us increase our usefulness to customers. All in the South benefit.
