Food Supply Major Problem In Africa

LIBAMBA, Cameroun, West Africa (KF) — Food supply for an increasing urban population is becoming a major problem in Africa. An American couple has settled here to help the people solve it.

Wade H. (Hap) Reeves, a tall rangy Nebraskan, and his wife who grew up in Leonia, New Jersey, have started a motel chicken farm here. With the weapons of faith, agricultural knowledge, and a deep concern for the people they serve, they are pitting themselves against the jungle climate and centuries of inertia in an effort to hatch a more stable and prosperous Africa.

At the Reeves farm Africans learn modern techniques for poultry raising and egg production, and are given a start in creating their own farms. The point is basic and simple: According to economists, Africa must create a sound, fairly prosperous agricultural base if it is to modernize and industrialize successfully.

Traditionally, Africa has functioned with a subsistence hand-to-mouth agriculture. It needed nothing more. But now, food must be produced for urban, industrial populations. And this means modern farming.

"You can't plow and plant this land — not here in the rain forest," Hap Reeves remarked. "For one thing, the soil is actually quite poor. The heavy vegetation grows in a thin skin of topsoil that is renewed by decay — and just as quickly used. When you plow, you destroy the balance. And the thin topsoil washes out with the first rain. All you have is a hole."

Hap looked across the small model farm in its jungle clearing, and continued, "You can raise cattle in the grasslands. But here in the rain forest cattle die like flies from the parasites."

"But we have found that chickens can be raised very successfully. We have found local plants that can be ground and mixed into a nourishing food. So we've made a start. Africans can come here, learn poultry farming, and then go home and start their own farms. Within eighteen months they can be earning substantially more than before."

He added that progress is gradual, though the word is beginning to get around. He and Mrs. Reeves stick to their task with cheer and dedication. They are Christian missionaries, schooled in a tradition of commitment, and they do not tire or become discouraged.

AT FORT BRAGG — (AHTNC) — Army Pvt. William F. Goins, son of Mr. and Mrs. William O. Goins, 419 S. Pinchback Ave., Bessemer City, N. C., was assigned to the 82d Airborne Division at Fort Bragg, N. C., Jan. 14. Elements of the division are currently in the Dominican Republic serving as part of the Inter-American Peace Force. An integral part of the Strategic Army Command, the 82d maintains an immediate force for airborne deployment throughout the world. The 21-year-old soldier, an infantryman with the division, entered the Army in July 1965, received basic training at Fort Jackson, S. C., and was last stationed at Fort Benning, Ga. He is a 1962 graduate of Lincoln High School and attended North Carolina Agricultural and Technical College in Greensboro.

Mrs. Ellen Gragg On G-W Faculty

BOILING SPRINGS — Mrs. Ellen Gragg of Rt. 4, Shelby, has joined the Gardner-Webb College faculty as an instructor of Women's Physical Education and Health. It was announced today by Dr. E. Eugene Poston, president.

Mrs. Gragg is a 1962 graduate of Gardner-Webb College and received her B.S. Degree at Limestone College in 1964. She taught at Blacksburg High School for one year after graduation. Her husband is Larry Edward Gragg and the couple has one child.

ADMINISTRATOR'S NOTICE

Having qualified as administrator for the estate of Johnny Buford Barnes, deceased, all persons having claims against said estate will please file same with the undersigned on or before the 26th day of July, 1966, or this notice will be pleaded in bar of any recovery.

All persons indebted to said estate will please make immediate payment.

This the 26th day of January, 1966.

J. Ollie Harris, Administrator
 George B. Thomasson, Attorney

Sample Properly, Clapp Advises

Cleveland County farmers who have not taken their soil samples yet may be faced with the problem of collecting soil samples from wet fields, according to Cleveland County Extension Chairman H. R. Clapp. He further states that wet fields can be sampled properly if a few simple precautions are taken.

About 15 to 20 spots should be sampled in the field to be tested if the field is wet or dry. However, it is more difficult to mix wet soil. All of the soil collected should be air dried until it becomes crumbly before it is roughly mixed to get a composite soil sample. The composite soil sample should be air dried further before putting it in the sample box and sending it to the Soil Testing Laboratory for two good reasons; first, dry samples are lighter and require less postage if the samples are mailed, and the second reason is to reduce damage to the paper sample boxes.

Localized spots that are usually wet because of poor drainage should be sampled separately if they are large enough to be treated differently. Poorly drained areas usually need more lime than well drained soils in the same field. They normally contain more organic matter and the soil environment is different because of excess water. Sample these areas as suggested above because the value of a soil test depends on how well the sample represents the field from which it came.

Soil testing is the best method for determining what the soil needs to produce big crops. Give soil testing a chance to help you by taking good samples.

Heart Facts

Q — How is research protecting our hearts?
 A — Research is protecting our hearts by a relentless attack on questions of how and why heart disease happens. "The leading goal of heart research," says one research authority, "is to unmask the basic causes of hardening of the arteries and high blood pressure." Once the basic causes are known, new methods of treatment, prevention and even cure will follow.
