Weekly Health Tip

By WILSON GRIFFIN

Research on the thalidomide tragedy of malformed children indicates that the drug interfered with the use of nicotinic acid (or B-complex vitamin) in the fetus. Similarly, the introduction of any non-nutrient chemicals - nicotine, alcohol, chemical food additives, drugs, etc. - may cause harmful alterations in the enzyme system of the unborn child. A 125 pound woman may tolerate cigarettes, barbiturates, or other chemicals, but not so the one-ounce fetus within her.

After you see your doctor bring your prescription to

Griffin's Drug Store
