VRORERVRORERVR **Keep Child Resistant** Containers—Child Resistant

The purpose of dispensing medicines in what are called "child resistant" containers is to substantially cut down and try to prevent the ever increasing number of accidents involving children and drugs. But, this purpose is defeated when a child is given an empty med cine container with which to play.

It does not take a child too long a time of experimentation to figure out how to get an empty container open. The next time i could be one that is full. Give your children a break and buy that extra time a child-proof container gives you when they haven't had a chance to find out how it works.
