For quicker prescriptions

What happens when a patient forgets his prescription bottle and wants a refill? Ordinarily, since we fill prescriptions by numbers, it's hard to locate your original prescription order. We will need either the number off your bottle, or a new Rx-order, entirely. So, it helps to find your bottle. We can, however, as a last resort call your Doctor for refill instructions.

Either way, it's best to remember to bring your bottle with you whenever you need a refill. Then there's no wasted motion, no bothering the doctor, and quicker service.
