HEALTH VIEWS
 RAGAN HARPER
"Bone Bank" deposits
 Calcium is essential for brain and heart function, blood clotting and cell division. If there's not enough in our diets, our bodies withdraw calcium from our 'bone banks'. This may result in osteoporosis.
 This crippling disease can make bones so weak that a minor fall or friendly hug can break them. Adding extra calcium to your diet once bone depletion has occurred can protect what's left, but it won't restore bone that has already been lost.
 To "bone up" on answers about calcium-rich diets and supplements, pick up a FREE BROCHURE at our Rx counter. We're here for your good health.
