PITCH AND VOICE QUALITY

and quality of the voice con-

trolled?
ANSWER: The factors controlling vocal pitch include the length, mass, and elasticity of the cords; frequency of vibrations of the vocal bands, and subglottic air pressure.

that he was only away from the vehicle for 15 minutes, but while he was gone, someone stole his tool box, with contents valued at \$125 therein. The tool box was metal and green in color. It was in the cab of the truck.

When it comes to the quality of the vocal, one thinks of pleasantness or pleasing to the ears of the listener. Quality may be controlled or varied by both the muscles of larynx, and by the muscles that adjust the size, shape, as well as the size and shape of the openings of the resonating cavities (the nose, mouth, and throat).

It should be noted, however, that any change in vocal quality that results from muscular control of the vocal cords are probably purely incidental.

The subject was arrested, but not for damage to property. The woman said she would sign a warrant, but hadn't done so at CAROLINIAN press time.
