Audit Selection Technique

Beginning this year, the new "discriminant function" technique will be introduced in the selection of certain individual federal tax returns for audit. Under this technique, proven mathematical formulas will be programmed into computers to identify and select returns for examination. This system, by weighing significant return characteristics permits the ranking of selected returns by greatest potential tax error.

Foam rubber mattresses never need turning. That's important with any mattress, but with the new super size models, it's vital. A kingsize inner-spring can weigh 140 pounds more than most women.
